

EB-2007-0050

IN THE MATTER OF the *Ontario Energy Board Act 1998*, S.O.1998, c.15, (Schedule B) (the “Act”);

AND IN THE MATTER OF an Application by Hydro One Networks Inc. pursuant to section 92 of the Act, for an Order or Orders granting leave to construct a transmission reinforcement project between the Bruce Power Facility and Milton Switching Station, all in the Province of Ontario.

PROCEDURAL ORDER NO. 4
The Leave to Construct Application

Hydro One Networks Inc. (“Hydro One”) has filed an amended application (the “Amended Leave to Construct Application”) with the Ontario Energy Board (the “Board”) dated November 30, 2007 under section 92 of the Ontario Energy Board Act, 1998, S.O. 1998, c.15, Schedule B (the “Act”). This Amended Leave to Construct Application addresses certain changes to Hydro One’s original application filed with the Board on March 29, 2007.

Hydro One is seeking an Order of the Board to construct approximately 180 kilometres of double-circuit 500 Kilovolt (“kV”) electricity transmission line adjacent to the existing transmission corridor (500 kV and/or 230 kV) extending from the Bruce Power Facility in Kincardine Township to Hydro One’s Milton Switching Station in the town of Milton. Hydro One also proposes to make modifications at the Milton, Bruce A and Bruce B transmission stations to accommodate the new transmission lines. This Leave to Construct Application was given Board file No. EB-2007-0050.

Hydro One has submitted that the project is required to meet the increased need for transmission capacity associated with the development of wind power in the Bruce area and the return to service of nuclear units at the Bruce Power Facility. Hydro One proposes an in-service date of Fall 2011 for the new 500 kV transmission line and related facilities. The estimated cost of the transmission project is approximately \$635 million.

Application Amendments

Hydro One is undertaking local route alternative studies in three areas along the proposed transmission project. The potential local route changes are being examined in response to comments received by Hydro One during its ongoing consultation activities.

The original proposed reference route for the Bruce to Milton Transmission Reinforcement Project (the "Reference Route") and the three areas (Brockton/ Hanover/ West Grey; Camp Creek; and Halton Hills) for potential local route changes are shown on a map attached as Appendix A to this Order.

An Issues List for this proceeding was established by the Board in its "Issues Day - Decision and Order" dated September 26, 2007, and is attached to this Order as Appendix B. Issuance of the current Issues List followed an oral hearing (an "Issues Day") on September 17, 2007.

The Board invites intervenors in this proceeding to examine the current Issues List and make submissions as to whether changes or additions are appropriate. The Board will issue a final Issues List in advance of the deadline for interrogatories.

The Board considers it necessary to make provision for a number of procedural matters for the Amended Leave to Construct Application. An updated list of Intervenors is attached as Appendix C to this Order. A schedule showing the time line for the various procedural events is attached as Appendix D to this Order. Please be aware that further procedural orders may be issued from time to time.

THE BOARD ORDERS THAT:

1. Intervenors wishing to make submissions on the current Issues List included in the Amended Leave to Construct Application that Hydro One Networks Inc. has filed with the Board on November 30, 2007, shall file such submissions with the Board, and a copy to all intervenors of record no later than **Friday, February 15, 2008**.
2. The Board may hold an Issues Day hearing if it deems it necessary on **Thursday February 21, 2008 at 9:30 a.m.** in one of the Board's Hearing rooms located on the 25th floor, 2300 Yonge Street. A Final Issues List will be made available to all

intervenors, following the Board's review of intervenor written submissions and oral submissions if an Issues Day hearing was held.

3. Intervenors, who wish information and material from Hydro One that is in addition to the evidence filed with the Board, and that is relevant to the proceeding, shall request it by written interrogatories filed with the Board and delivered to Hydro One on or before **Monday March 10, 2008**. All interrogatories must identify the relevant Issue by Issue Number in the format as shown by the example attached as Appendix E.
4. Hydro One shall file complete responses to the interrogatories with the Board and deliver all the responses to all the Intervenors on or before **Tuesday March 25, 2008**.
5. Intervenors and Board staff who wish to present evidence which is relevant to the proceeding, shall file that evidence with the Board and deliver it to Hydro One and the other Intervenors on or before **Monday March 31, 2008**.
6. Any party (Intervenor, Board staff or Hydro One) who requires additional information related to an Intervenor's filed evidence, which is relevant to the proceeding, shall request it by written interrogatories filed with the Board and delivered to the parties on or before **Friday April 11, 2008**.
7. Responses to the interrogatories shall be filed with the Board and delivered to Hydro One and the other Intervenors on or before **Friday April 25, 2008**.
8. The evidentiary phase of the oral hearing will commence at 9:30 a.m. on **Thursday May 1, 2008 at a location to be determined**.
9. All parties filing material must provide these to the Board Secretary as ten hard copies and one electronic copy in searchable PDF format at boardsec@gov.on.ca, **by 4:45pm on the date indicated**, and copy all parties.

**[Extracted “Issues List” - Board’s “Issues Day - Decision and Order”]
(September 26, 2007)**

1.0 Project Need and Justification

- 1.1 Has the need for the proposed project been established?
- 1.2 Does the project qualify as a non-discretionary project as per the OEB’s Filing Requirements for Transmission and Distribution Applications and if so what categories of need as referred to in Section 5.2.2 of these Filing Requirements are relevant?
- 1.3 Have all appropriate project risk factors pertaining to the need and justification (including but not limited to forecasting, technical and financial risks) been taken into consideration in planning this project?
- 1.4 Is the project suitably chosen and sufficiently scalable so as to meet all reasonably foreseeable future needs of significantly increased or significantly reduced generation in the Bruce area?

2.0 Project Alternatives

- 2.1 Have all reasonable alternatives to the project been identified and considered?
- 2.2 Has an appropriate evaluation methodology been applied to all the alternatives considered?
- 2.3 For all of the considered alternatives, does the evaluation methodology utilized include a cost benefit comparison as well as a comparison of all quantitative and qualitative benefits?
- 2.4
 - a) Have appropriate evaluation criteria and criteria weightings been utilized in the evaluation process for the alternatives and the proposed project and what additional criteria/weightings could be considered?
 - b) Have appropriate comparisons been carried out on all reasonable alternatives with respect to reliability and quality of electricity service, including stability and transient stability levels, voltage performance and Loss of Load Expectation projections under normal and post-contingency conditions?
 - c) Do the alternatives meet the applicable standards for reliability and quality of electricity service?
- 2.5 Is the proposal a better project than the reasonable alternatives?

- 2.6 Are the project's rate impacts and costs reasonable for:
- the transmission line;
 - the station modifications; and
 - the Operating, Maintenance and Administration requirements.

3.0 Near Term and Interim Measures

- 3.1 Are the proposed near term and interim measures as outlined in the application appropriate?
- 3.2 Can the proposed near term and interim measures be utilized longer than the suggested two to three year time frame?
- 3.3 If these proposed near term and interim measures could be utilized for a longer period than proposed, could they (or some combination of similar measures) be considered an alternative to the double circuit 500 kV transmission line for which Hydro One has applied?

4.0 Reliability and Quality of Electricity Service

- 4.1 For the preferred option, does the project meet all the requirements as identified in the System Impact Assessment and the Customer Impact Assessment?
- 4.2 Does the project meet applicable standards for reliability and quality of electricity service?
- 4.3 Have all appropriate project risk factors pertaining to system reliability and quality of electricity service been taken into consideration in planning this project?

5.0 Land Matters

- 5.1 Are the forms of land agreements to be offered to affected landowners reasonable?
- 5.2 What is the status and process for Hydro One's acquisition of permanent and temporary land rights required for the project?

6.0 Aboriginal Peoples Consultations

Have all Aboriginal Peoples whose existing or asserted Aboriginal or treaty rights are affected by this project been identified, have appropriate consultations been conducted with these groups and if necessary, have appropriate accommodations been made with these groups?

7.0 Conditions of Approval

If Leave to Construct is approved, what conditions, if any, should be attached to the Board's order?

Interrogatory No. 1

Ref. Exh. B/T 6/S 5/Appendices 1,5,6

[abbreviation for Exhibit B/Tab 6/Schedule 5/Appendices 1, 5, and 6]

Issue Number: 1.3.

1.3. Issue: Is the project suitably chosen and sufficiently scalable so as to meet all reasonably possible future needs of significantly increased or reduced generation?

Request

Please provide a detailed description of how the added capacity in MW of the double-circuit 500 kV transmission line will be utilized to meet the additional capacity in MW of the two nuclear units (brought into service after being decommissioned), and the committed and projected wind generation in MW by fully reflecting the expected pattern of delivery from each type of generation during the peak demand seasons in summer and winter over a study period of 30 years commencing at the projected in-service date of December, 2011.
