

HYDRO ONE INTERROGATORY #2

INTERROGATORY

What connection cost should Wirebury pay to the host LDC for each of the connections noted in interrogatory 1? Why?

RESPONSE

Wirebury and indirectly its customers, will pay the full cost of each of the embedded distribution connections noted in its response to Hydro One's interrogatory, Ex. J12, T8, S1, using the Distribution System Code's economic feasibility formula. Where required, Wirebury will seek OEB approval for a wheeling rate from the host distributor. For connections in Networks service area, Wirebury will use Hydro One's proposed wheeling rate. To the extent that the wheeling rates are not sufficient to cover a specific connection cost as determined by the economic feasibility formula, Wirebury and/or its customer(s) will provide a capital contribution covering the outstanding amount.
