Subject: SMART HYDRO METRES

Toronto November 15/04

I recommend a small digital hydro metre (DHM) for house occupants, in the kitchen area, where the centre of activity takes place. The new digital hydro metre (DHM) would be a companion to the Toronto hydro installed smart metre.

The kitchen (DHM) metre should be designed to display the actual load, so that the occupants could evaluate the different appliances. Please E-mail for further information or reply to inform me if this type of metre is already available to residential customers

Thank you
