# **EXECUTIVE SUMMARY**

This report is submitted in fulfillment of the requirements of the Ontario Energy Board (the "Board" or the OEB), under the <u>Amended Requirements for Annual Reporting of</u> <u>Conservation and Demand Management Initiatives</u>, issued on March 1<sup>st</sup> 2007, which also included requirements for reporting on Incremental CDM Funding Approved in Rates<sup>1</sup>.

This report – due April 30<sup>th</sup>, 2007 - has been prepared in accordance with the above referenced guidelines and requirements and gives an account of three Conservation and Demand Management (CDM) programs proposed by Enersource and accepted by the Board in the rate filing approved with a <u>Decision and Order</u> issued on April 12, 2006, under docket number RP-2005-0020/EB-2005-0360, approving distribution rates effective May 1<sup>st</sup>, 2006. The accepted CDM programs are directed to the Residential Sector.

Each of the three CDM programs was assessed for economic feasibility, using the OEB's <u>Total Resource Cost (TRC) Test Guide</u><sup>2</sup>, in its October 2006 revision.

The approved CDM programs are highlighted below:

### Hot Water Heater Tune-up Program

- <u>Highlights:</u> In 2006 we carried out 1,975 Tune-ups, between May 1<sup>st</sup> and December 31<sup>st</sup>, resulting in over 2,445,000 kWh annual energy savings.
  - On a lifecycle basis, energy savings are projected at about 19,600,000 kWh.
  - Summer peak demand reduction of 114 kW and winter peak demand reduction of 454 kW are also projected, based on results.
  - Efficient, low flow shower heads and faucet aerators were also distributed, resulting in water savings projected at about 54,500 m<sup>3</sup> annually and 654,000 m<sup>3</sup> on a lifecycle basis.
  - This initiative was screened for Total Resource Cost (TRC) cost test, yielding a projected Benefit-Cost Ratio of 3.0.
  - Actual results to date show a 5.9 TRC Benefit-Cost Ratio.

### Seasonal Light Exchange Program

*Highlights:* - In 2006 we distributed over 6,300 LED light sets resulting in about 110,000 kWh annual energy savings and a winter peak demand reduction of 51 kW.

<sup>&</sup>lt;sup>1</sup> Available at: <u>http://www.oeb.gov.on.ca/html/en/industryrelations/ongoingprojects\_distconservation.htm</u>

<sup>&</sup>lt;sup>2</sup> Available at: <u>http://www.oeb.gov.on.ca/documents/cases/RP-2004-0203/cdm\_trcguide\_021006.pdf</u>

- Lifecycle energy savings are projected at about 3,275,000 kWh.
- Results to date show a TRC Benefit-Cost Ratio of 1.3 against a projected 1.1.
- Actual results would have been better, if not for unforeseen quality problems, which required a massive recall and unplanned expenses to inform the public.
- Cooperative efforts involving a major Region of Peel food bank facilitated the distribution of seasonal lights to needy customers.
- Events Van Program
- <u>Highlights:</u> The Special Events Van initiative, with its team, supports all our CDM efforts, by bringing the conservation message and means to start conserving directly to our customers.
  - Between May 1<sup>st</sup> and December 31<sup>st</sup>, the team has participated at 46 events at various venues around the City, spreading the energy efficiency and conservation message among the residents of Mississauga.
  - Almost 13,400 CFLs and thousands of educational and promotional items were distributed.
  - Annual energy savings from distributed CFLs were calculated at over 1,460,600 kWh.
  - Lifecycle energy savings are projected at over 6,280,700 kWh.
  - A TRC Benefit-Cost Ratio of 2.3 was calculated based on results to date, against a projected value of 3.6.

The cumulative TRC Benefit-Cost Ratio for the three-program portfolio was calculated at 3.8, based on actual results for 2006. Projected cumulative value was 3.3.

For the above three CDM programs, by December 31<sup>st</sup>, 2006, Enersource invested approximately \$500,000 that resulted in annual savings to-date of over 4 million kWh and about 30,000,000 kWh on a lifecycle basis. It should be noted that the benefits of these projects will continue to accrue in 2007 and results will further improve as deployment increases.

Enersource' CDM efforts help promote the Provincial directive to foster a *conservation culture* in Ontario.

# 1. Introduction

On April 12, 2006 the Ontario Energy Board (the Board) issued its Decision and Order (decision) in the RP-2005-0020/EB-2005-0360 proceeding, with respect to an application filed by Enersource Hydro Mississauga Inc. (Enersource), for an order or orders approving distribution rates, effective May 1<sup>st</sup>, 2006.

Among other things, that decision approved funding for three Conservation and Demand Management (CDM) Initiatives proposed by Enersource in the referenced rate filing:

- Hot Water Heater Tune-up Program
- Seasonal Light Exchange Program
- Events Van Program

This report gives an overview of the three CDM programs referenced above, an assessment of their benefits, a description of each initiative undertaken under each program and an appraisal of results to December 31<sup>st</sup>, 2006 and lessons learned.

On December 21<sup>st</sup>, 2005 the Board had issued a <u>Guideline for Annual Reporting of CDM</u> <u>Initiatives</u> that explained the requirements and timing for annual reporting of CDM initiatives. On March 1<sup>st</sup> 2007 the Board issued <u>Amended Requirements for Annual</u> <u>Reporting of Conservation and Demand Management Initiatives</u>, which also included requirements for reporting on Incremental CDM Funding Approved in Rates. This report – due April 30<sup>th</sup>, 2007 - has been prepared in accordance with the above referenced guidelines and requirements.

Further, each initiative or program was assessed for economic feasibility, using the OEB's <u>Total Resource Cost (TRC) Test Guide</u> - as revised in October 2006.

# 2. Evaluation of the CDM Plan

Following the experience with similar pilot CDM Programs previously implemented under 3<sup>rd</sup> Tranche funding, Enersource successfully implemented three programs directed to the residential customer sector:

- Hot Water Heater Tune-up Program
- Seasonal Light Exchange Program
- Events Van Program

All programs support the Provincial Government's efforts to promote a cultural shift towards energy conservation in Ontario, by increasing awareness of our customers towards this need.

Societal benefits resulting from the implementation of the above CDM initiatives are evidenced by a TRC Cost-Benefit ratio of 3.8. Economics are expected to improve moving forward towards the completion of these programs, since accruing benefits will reduce the impact of high initial program costs.

A detailed discussion of the impact on energy conservation and demand management resulting from the implementation of the three programs is presented in <u>Section 3</u>. A series of <u>Appendices</u> also give numerical results in a table format:

#### Appendix A – Evaluation of the CDM Plan

 Summarizes cumulative energy savings and TRC benefits for the three programs.

#### Appendix B – Discussion of the Program

 Individual Programs' summary description, annual and lifecycle energy savings and benefit results are presented in a series of three appendices.

#### Appendix C - Program and Portfolio Totals

 Presents an overview on a portfolio basis of the three CDM Program's costs, TRC benefits, summer peak demand reduction and annual and lifecycle results for energy savings.

# 3. Discussion of the Programs

## 3.1 Residential

### Hot Water Heater Tune-up Program

### Description

The Water Heater Tune-up Program was created for the purpose of reducing the energy consumption by the residents of Mississauga. The Tune-ups are completed by co-op students who visit the homes of Mississauga residents who rent electric water heater tanks.

The forty-five minute appointments consist of a team of two who enter the home, wrap a thin insulation jacket around the hot water tank, install up to four compact fluorescent light bulbs, a low flow shower head, as well as a water aerator for sink taps. After each appointment is completed and questions are answered, the residents are left with some information on ways they can further reduce their energy consumption.

### Target users

All residential customers, including Low Income and Social Housing customers.

### Benefits

This program is geared towards reducing system peak and electricity consumption, while increasing customer awareness of the need to conserve both electricity and water, in support of a shift towards a conservation culture.

### Discussion of 2006 Activities

Action

- The Tune-ups are completed by contractors who visit the homes of Mississauga residents with electric water heater tanks.
- The Tune-up team:
  - wraps an insulating jacket around the hot water tank
  - installs up to four compact florescent light bulbs
  - installs a low flow shower head
  - installs a water aerators for sink taps
- Customers are left with conservation literature.

#### Results to Date

- 1,975 Tune-Ups were completed between May 1<sup>st</sup> and December 31<sup>st</sup>.
- Installed or distributed to-date:
  - 1,822 Efficient Showerheads
    - 1,733 Faucet Aerators
    - 1.899 Tank Wraps (some already had water heater blankets)

#### Enersource Hydro Mississauga

2006 CDM Annual Report - Incremental CDM Funding Approved in Rates

- 7,613 CFLs
- 1,612 m of hot water tubing insulation.
- Summer peak demand reduction of 114 kW is projected.
- o Winter peak demand reduction of 454 kW is projected.
- Annual energy savings are projected at over 2,445,000 kWh.
- Lifecycle energy savings are projected at about 19,600,000 kWh.
- About 54,500 m<sup>3</sup> of annual water savings and 654,000 m<sup>3</sup> on a lifecycle basis.
- Of the approved \$475,000 budget, close to \$245,000 were spent by December 31<sup>st</sup>, 2006.
- Actual results to date show an excellent 5.9 TRC Benefit-Cost Ratio against a projected Benefit-Cost Ratio of 3.0.

Next Steps

• The program will terminate when funding is exhausted.

### LED Holiday Light Exchange Program

#### Description

Enersource is encouraging residents to "set free" their old incandescent holiday lighting, by exchanging them with LED strands at various special events held around the City. LED lights result in an 80% energy savings over traditional lights and help reduce winter demand.

Enersource partnered with one of the Region of Peel's largest community food banks, to deliver energy savings to the city's neediest residents during the Holiday Season.

The old lights are disposed of in an environmentally friendly manner.

### Target users

All residential customers, including Low Income and Social Housing customers.

#### Benefits

Increased customer awareness, improved product supply, culture shift, and significant demand and energy reductions.

### Discussion of 2006 Activities

#### Action

- Implement an exchange campaign that encourages customers to exchange their incandescent Christmas lighting, for energy saving LED lights.
- Exchange LED lights during the Christmas season, at various special events in Mississauga.
- Partner with community food banks, to deliver energy savings to the city's neediest residents during the Holiday Season.
- Give customers energy efficiency educational information.
- o Dispose of old inefficient lights in an environmentally friendly manner.

#### Results to Date

- Enersource distributed over 6,300 LED light sets in 2006.
- No summer peak demand reduction is attributable.
- Winter peak demand reduction of 51 kW is projected.
- Annual energy savings are projected at about 110,000 kWh.
- o Lifecycle energy savings are projected at about 3,275,000 kWh.
- Results to date show a TRC Benefit-Cost Ratio of 1.3 against a projected 1.1.

#### Next Steps

• The funding was exhausted and the program terminated in 2006.

### **Special Events Van Program**

### Description

The Special Events Van Program was created for the purpose of educating the public about energy conservation and promoting ways for consumers to reduce their electricity bills. The program includes a team of contract students, constantly on the road with the natural gas fuelled van, interacting with the public. The van is wrapped with energy saving tips and graphics.

The team represents Enersource Mississauga at various community venues. As part of the energy efficient message, the students hand out compact fluorescent lamps and brochures.

### Target Users

All residential customers, including Low Income and Social Housing customers.

### Benefits

Supports existing programs and drives energy conservation awareness that will facilitate the culture change in Ontario towards conservation.

### **Description of 2006 Activities**

#### Action

- Utilize the special events team to talk to customers about energy conservation, by participating in community events like Carassauga, the Bread and Honey Festival, the Islamic BBQ.
- Distribute CFL bulbs to foster the energy saving message.

#### Results

- Almost 13,400 CFLs and thousands of educational and promotional items were distributed, to contribute spreading the energy efficiency and conservation message among the residents of Mississauga.
- Between May 1<sup>st</sup> and December 31<sup>st</sup>, they have participated at 46 events at various venues around the City.
- Annual energy savings from distributed CFLs were calculated at over 1,460,600 kWh.
- Lifecycle energy savings are projected at over 6,280,700 kWh.
- Close to \$150,000 of the approved \$985,000 budget were spent.
- A TRC Benefit-Cost Ratio of 2.3 was calculated based on results to date, against a projected value of 3.6.

#### Next Steps

• The program will terminate when funding is exhausted.

# 4. Lessons Learned

The three CDM programs being reported on were delivered to the residential sector exclusively. Enersource benefited from the experience with similar CDM pilot programs, launched in 2005 under 3<sup>rd</sup> Tranche funding.

Relative to the implementation of these programs, Enersource has identified "lessons learned' in the following aspects:

- Customer decision making factors with respect to energy efficiency measures:
  - All customers showed a great interest in energy conservation.
  - All were eager to learn about energy saving opportunities.
  - Customers are most responsive when incentives or giveaways are offered.
- Customer behaviour:
  - Customers educated in energy conservation and the economic benefit of adopting CDM measures were gratified with the sense of responsibility imparted by the realization of contributing to achieving a solution to a greater problem.
  - The Water Heater Tune-up program was very successful, with numerous calls received from satisfied customers or others interested in signing up for the program.
  - Response and participation to the other two programs were equally positive.
- Opportunities and relevant constraints:
  - There was considerable support from the Peel Region food bank we partnered with, in delivering the Seasonal Lights program, because of the direct benefit to their needy clients.
  - Constraints we had to overcome:
    - After we started distribution in November, the LED strands were found to be sub-standard, presenting shock and fire hazard and had to be recalled.
    - This incident seriously affected our original program, since

       besides the unplanned efforts required for informing the public and recovering the already distributed strands – it was difficult to source replacement LEDs in sufficient quantities that late in the year.
  - In a future program repeat, precautionary steps will have to be taken, including multiple suppliers, to avoid similar problems, even if at the expense of cost efficiency.
  - There has been a terrific response to the Events Van program in Mississauga, based on the number of people who engaged the students with energy conservation questions. In fact, participation

in community events throughout the City proved to be a key factor, as the events van team was able to attract crowds of customers eager to learn about energy conservation.

# 4.1 Comments on Program Success

Interest was noted in the residential market for techniques for saving energy. All programs were found effective to help support the Provincial Government's efforts to promote a cultural shift towards energy conservation in Ontario.

Based on results to date and confirming the experience with similar pilot CDM Programs previously implemented under 3<sup>rd</sup> Tranche funding, we feel that the current programs were successful. Full benefits started to be realized in 2006 and will continue through 2007 and beyond.

The following Table summarizes results:

	Successful? High (H) Medium (M) Low (L)	Continue?	Notes
Residential Market Sector			
Hot Water Heater Tune-up Program	Yes – H	Yes	Program could continue until exhaustion of electric water heaters' stock in Mississauga.
LED Holiday Light Exchange Program	Yes – H	Yes	Very successful, especially with low income customers. All customers were appreciative of chance to save energy.
Special Events Van Program	Yes - H	Yes	Event Van activities support all program areas and assist with marketing and promoting the conservation message.

# 5. Conclusions

This report gives an account of three Residential Conservation and Demand Management (CDM) programs proposed by Enersource and accepted by the Board in the rate filing approved with a <u>Decision and Order</u> issued on April 12, 2006, under docket number RP-2005-0020 / EB-2005-0360, approving distribution rates effective May 1<sup>st</sup>, 2006.

Based on results for the three programs to the end of December 2006, we can conclude the following:

- By December 31<sup>st</sup> 2006, Enersource invested approximately \$500,000 or approximately 30% of the available funding.
- The investment resulted in annual savings of over 4 million kWh and about 30,000,000 kWh on a lifecycle basis, based on results to-date.
- The benefits of these projects will continue to accrue in 2007 and results will further improve as deployment increases.
- The effectiveness of programs' design and delivery was proven by a cumulative TRC Benefit-Cost Ratio of 3.8 for the three-program portfolio, based on actual results for 2006. The projected cumulative value was 3.3.
- The delivery of CDM Programs by Enersource created enormous awareness among the residents of Mississauga for the need to save energy and reduce consumption.
- Enersource benefited from the experience with similar CDM pilot programs, launched in 2005 under 3<sup>rd</sup> Tranche funding.
- Annual savings constitute enough electricity to power over 440 homes.

The capacity constraints facing the electricity distribution system in Ontario during periods of high demand are well known and have created a heightened sense of urgency for all users to contribute to a better management of our electricity. Enersource Hydro is committed to helping promote the shift to a culture of conservation and will work cooperatively with the Energy Board, the IESO, the Ontario Power Authority and other members of the Coalition of Large Distributors to make this happen.

#### A. Name of the Program:

#### Hot Water Heater Tune-up

Description of the program (including intent, design, delivery, partnerships and evaluation):

The Water Heater Tune-up Program was created for the purpose of reducing the energy consumption within the residents of Mississauga's many communities. The Tune-ups are completed by co-op students who visit the homes of Mississauga residents who rent electric water heater tanks from Reliance Home Comfort.

The forty-five minute appointments consist of a team of two who enter the home, wrap a thin insulation jacket around the hot water tank, install up to four compact fluorescent light bulbs, a low flow shower head, as well as a water aerator for sink taps. After each appointment is completed and questions are answered, the residents are left with some information on ways they can further reduce their energy consumption. This program is geared towards reducing system peak and electricity consumption, while increasing customer awareness of the need to conserve both electricity and water.

#### E. Assumptions & Comments:

Action

- The Tune-ups are completed by contractors who visit the homes of Mississauga residents with electric water heater tanks.
- The Tune-up team:
- wraps a thin insulating jacket around the hot water tank
- · installs up to four compact florescent light bulbs
- installs a low flow shower head
- installs a water aerators for sink taps
- Customers are left with conservation literature.

#### **Results to Date**

- 1,975 Tune-Ups were completed between May 1st and December 31st.
- Installed or distributed to-date:
- 1,822 Efficient Showerheads
- 1,733 Faucet Aerators
- 1,899 Tank Wraps (water heater blankets)
- 7,613 CFLs
- 1,612 m of hot water tubing insulation, corresponding to 661 units of 8-ft lengths of insulation (average from OEB Measures List).
- Summer peak demand reductions of 114 kW are projected.
   Winter peak demand reductions of 454 kW are projected.
- Annual energy savings are projected at over 2,445,000 kWh.
- Lifecycle energy savings are projected at about 19,600,000 kWh.

#### Next Steps

- Benefits should be estimated if costs have been incurred and the technology has been deployed. Benefits reflect the present value of the measure for the number of units deployed in the year, i.e. the number of units times the net present value per unit benefit specified in the TRC Guide.
   For technologies which have not been deployed but for which the LDC has incurred costs, report only the TRC costs on a present value basis. Incentives (e.g. rebates) from the LDC to a customer are not a customer component of the TTC costs. However, payments made to a third party service provider to run an incentives program are program costs, and are to be included as TTC costs under the "Utility Program Costs" line.

The program will terminate at the end of available funding.

# Appendix B2 - Discussion of the Program

#### A. Name of the Program: Seasonal

Seasonal Light Exchange

Description of the program (including intent, design, delivery, partnerships and evaluation):

Enersource is encouraging residents to "set free" their old incandescent holiday lighting, by exchanging them with LED strands at various special events held around the City. LED lights result in an 80% energy savings over traditional lights and help reduce winter demand.

Enersource partnered with one of the Region of Peel's largest community food banks, to deliver energy savings to the city's neediest residents during the Holiday Season.

#### E. Assumptions & Comments:

#### Action

Implement an exchange campaign that encourages customers to exchange their incandescent Christmas lighting, for energy saving LED lights.

- Exchange LED lights during the Christmas season, at various special events in Mississauga.
- Partner with community food banks, to deliver energy savings to the city's needlest residents during the Holiday Season.
- Give customers energy efficiency educational information.
- Dispose of old inefficient lights in an environmentally friendly manner.

#### Results to Date

- Enersource distributed over 6,300 LED light sets in 2006.
- No summer peak demand reductions attributable.
- Winter peak demand reductions of 51 kW are projected.
- Annual energy savings are projected at about 110,000 kWh.
- Lifecycle energy savings are projected at about 3,275,000 kWh.

#### Next Steps

- The program will terminate at the end of available funding.
- <sup>1</sup> Benefits should be estimated if costs have been incurred and the technology has been deployed. Benefits reflect the present value of the measure for the number of units deployed in the year, i.e.
- 2 For technologies which have not been deployed but for which the LDC has incurred costs, report only the TRC costs on a present value basis. Incentives (e.g. rebates) from the LDC to a customer are not a component of the TRC costs. However, payments made to a third party service provider to run an incentives program are program costs, and are to be included as TRC costs under the "Utility Program Costs" line.

# Appendix B3 - Discussion of the Program

#### A. Name of the Program:

Events Van

Description of the program (including intent, design, delivery, partnerships and evaluation):

The Special Events Van Program was created for the purpose of educating the public about energy conservation and promoting ways for consumers to reduce their electricity bills. The program includes a team of contract students, constantly on the road with the natural gas fuelled van, interacting with the public. The van is promotionally wrapped in energy saving tips and graphics.

The team represents Enersource at various community venues in Mississauga. As part of the energy efficiency message, our students hand out compact fluorescent lamps and brochures as an inducement to start conserving.

The Events Van drives energy conservation awareness that will facilitate the culture change in Ontario, with respect to adopting more efficient energy consumption practices.

#### E. Assumptions & Comments:

#### Action

Utilize the special events team to talk to customers about energy conservation, by participating in community events like Carassauga, the Bread and Honey Festival, the Islamic BBQ and similar.

Distribute CFL bulbs, to foster the energy saving message.

#### Results

Almost 13,400 CFLs and thousands of educational and promotional items were distributed, to contribute spreading the energy

- efficiency and conservation message among the residents of Mississauga.
- Between May 1st and December 31st, they have participated at 46 events at various venues around the City.
- Annual energy savings from distributed CFLs were calculated at over 1,460,600 kWh.
- Lifecycle energy savings are projected at over 6,280,700 kWh.

#### Next Steps

The program will terminate at the end of available funding.

<sup>1</sup> Benefits should be estimated if costs have been incurred and the technology has been deployed. Benefits reflect the present value of the measure for the number of units deployed in the year, i.e. the number of units times the net present value per unit benefit specified in the TRC Guide.

2 For technologies which have not been deployed but for which the LDC has incurred costs, report only the TRC costs on a present value basis. Incentives (e.g. rebates) from the LDC to a customer are not a component of the TRC costs. However, payments made to a third party service provider to run an incentives program are program costs, and are to be included as TRC costs under the "Utility Program Costs" line.
