2020 Scorecard Management Discussion and Analysis ("2020 Scorecard MD&A")

The link below provides a document titled "Scorecard - Performance Measure Descriptions" that has the technical definition, plain language description and how the measure may be compared for each of the Scorecard's measures in the 2016 Scorecard MD&A: http://www.ontarioenergyboard.ca/OEB/ Documents/scorecard/Scorecard Performance Measure Descriptions.pdf

Scorecard MD&A - General Overview

- In 2020, Sioux Lookout Hydro met most of its performance targets for 2020, with the exception of System Reliability.
- Service Quality metrics are consistently above the Industry targets. Sioux Lookout Hydro is committed to maintaining this level of service.
- Safety and Reliability remain at the forefront of Sioux Lookout Hydro's priorities and the implementation of the Distribution System Plan
 in 2018 will solidify SLHI's commitment to improve these objectives for optimal results.
- Cost control is always a challenge for Sioux Lookout Hydro given its small customer base and large service territory containing long spans of line located in unpopulated forested areas. Maintaining and upgrading our Distribution System in order to improve system reliability and meet regulatory requirements will require ongoing investments as our infrastructure and equipment ages .Despite this, Sioux Lookout Hydro's Efficiency Assessment changed from 3 to 2 in 2019 indicating greater efficiency through the Ontario Energy Board's Benchmarking process.

Service Quality

New Residential/Small Business Services Connected on Time

Sioux Lookout Hydro has exceeded this measure from 2016 to 2020 scoring at 100% of services connected on time, which is within 5 days of receiving the connection authorization from the Electrical Safety Authority. Sioux Lookout Hydro strives to connect new services on the same day the connection authorization is received by the Electrical Safety Authority. In 2020 SLHI connected 40 new services.

Scheduled Appointments Met On Time

o In 2020 Sioux Lookout Hydro scheduled 32 appointments with a customer representative, all of these were met on time for a score of

2020 Scorecard MD&A Page 1 of 8

100.00%. Sioux Lookout Hydro's goal is to continue to meet 100% of appointments on time.

Telephone Calls Answered On Time

Sioux Lookout Hydro received 3,029 qualified incoming calls in 2020. 91.52% of these calls were answered within 30 seconds. This is a slight decrease from 2019, however Sioux Lookout Hydro significantly exceeds the industry target of 65%. Due to the small size of the utility, Sioux Lookout Hydro does not have a sophisticated Call Centre; therefore all calls are answered in person by our office staff.

Customer Satisfaction

First Contact Resolution

Of all the telephone, in person and written concerns from our customers, 100% were handled at the first point of contact and none had to be escalated in order to be resolved. Sioux Lookout Hydro takes pride in the fact that we can interact with our customers on a personal level due to the utility's small size. This allows better communication overall.

Billing Accuracy

o In 2020 Sioux Lookout achieved 99.96% billing accuracy, exceeding the industry target of 99%. We will continue to have effective processes and procedures in place to verify information before bills are issued in order to maintain a high level of billing accuracy.

Customer Satisfaction Survey Results

- o In June 2020 Sioux Lookout Hydro (SLH) conducted a customer satisfaction survey which ran until October 1, 2020. The survey used was developed by Innovative Research Group for the EDA in January 2016. Overall Customer satisfaction and five key areas were addressed. They were: Power Quality and Reliability, Price, Billing and Payment, Communications and the Customer Service Experience. A Customer Satisfaction Index Score was determined based on the results from each area.
- All residential and small business customers were given the opportunity to comment on SLH's performance, voice concerns and present their opinion on present and future services. SLH performed the survey using Survey Monkey and posted a pop-up invitation on SLH's website and provided a link in their Facebook page which was pinned to the top of the page. SLH had 84 responses through both collectors compared to 61 from the 2018 survey. This represents approximately 3% of all residential and small business

2020 Scorecard MD&A Page 2 of 8

customers.

- o The highest satisfaction score was 90.1% for Customer Service Experience and the lowest was Price at 64.3%.
- Sioux Lookout Hydro's Overall Customer Satisfaction score was 83.51% which exceeded its target of 80% and will strive to maintain this level going forward.

Safety

Public Safety

- Component A Public Awareness of Electrical Safety
- Sioux Lookout Hydro hired UtilityPULSE, an independent survey company to perform the survey in late 2019 using random digit dialing to connect with 300 members of the general population of the Municipality of Sioux Lookout.
- The survey was conducted late 2019 and completed in Q1 2020. The results indicate that the Level of Public Awareness has increased since the last survey by 1% to 80% public awareness.
- The survey was developed by the Electrical Safety Authority and will be used going forward to measure the level of awareness of key
 electrical safety precautions among the public within Sioux Lookout Hydro's service territory.

Component B – Compliance with Ontario Regulation 22/04

• Sioux Lookout Hydro was compliant with Ontario Regulation 22/04 for 2019 and all preceding years. The company is audited yearly by an independent auditor as required by Electrical Safety Authority. The purpose of the audit is "To conduct a comprehensive review of the processes, guidelines, and standards used by Sioux Lookout Hydro Inc. in their designs, construction, installations, use, maintenance and repairs, extensions, connections and disconnections of electrical equipment forming the distribution system as to avoid or reduce the possibility of electrical hazards." Sioux Lookout Hydro will continue to modify its processes in order to improve efficiency and to maintain a safe distribution system free from hazards.

Component C – Serious Electrical Incident Index

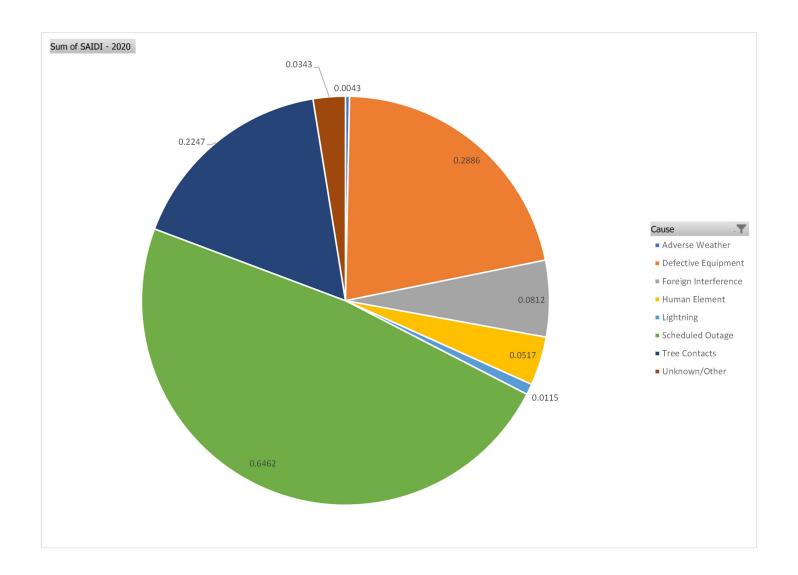

2020 Scorecard MD&A Page 3 of 8

• Sioux Lookout Hydro has not had any serious electrical incidents. Sioux Lookout Hydro will continue to promote safe work practices and safety to the public in order to prevent such incidents.

System Reliability

- Average Number of Hours that Power to a Customer is Interrupted
 - The average number of hours that power to customers was interrupted in 2019 increased by .49 from 0.85 to 1.34. The distributor specific target is 0.86, which is based on Sioux Lookout Hydro's five-year average. The increase is mainly a result of increased scheduled outages throughout the year for pole and cross arm replacements and a larger scheduled outage to replace a switch on a main feeder which was identified as likely to fail in the very near future. Scheduled outages were the leading cause of interruptions in 2020 at .65 (2019 was .09). These outages are necessary to provide better reliability in the future and mitigate unscheduled outages due to defective equipment. Sioux Lookout Hydro's outages due to defective equipment decreased in 2020 from .56 in 2019 to .29 in 2020. This was the main cause of outages in 2019.

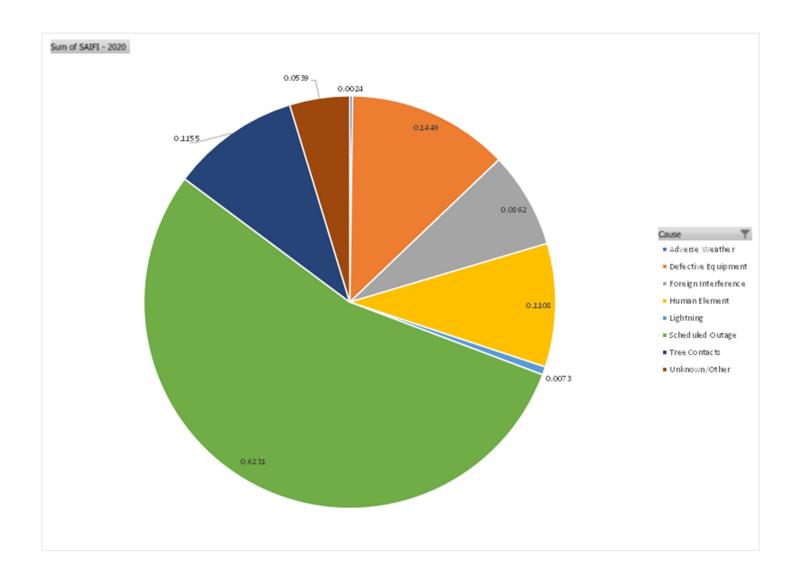

2020 Scorecard MD&A Page 4 of 8

Average Number of Times that Power to a Customer is Interrupted

The average number of times that power to a customer was interrupted in 2020 increased by .67 from 0.47 to 1.14 The distributor specific target of 0.66, which is based on Sioux Lookout Hydro's five-year average. As mentioned above, there were more scheduled outages in 2020 and one which affected a significant number of customers to replace a switch that was identified as having an imminent risk of failure.

Asset Management

Distribution System Plan Implementation Progress

- The Distribution System Plan implementation progress was a new performance measure instituted by the OEB starting in 2013. Sioux Lookout Hydro submitted their Distribution System Plan to the OEB as part of their 2018 Cost of Service Rate Application. The plan outlines Sioux Lookout Hydro's forecasted capital expenditures over the next five years from 2018 to 2022 that are required to maintain and expand the electrical distribution system within Sioux Lookout to service its current and future customers.
- 2018 was the first year of the five-year plan, which was approved by the OEB in the 2018 Cost of Service Application. The 108.4% is the percentage of the actual capital expenditures over the approved budgeted amount.
- o In 2019 Sioux Lookout Hydro's actual capital expenditures were 89.86% of the approved budgeted amount. This is mainly due to less money spent on pole replacements than budgeted for. The amount of actual expenditures varies depending on many different factors such as the location of the pole (i.e. rock, heavily wooded) and equipment attached to the pole.
- In 2020 Sioux Lookout Hydro's actual capital expenditures were 122.3% over the approved budgeted amount. The main driver for the increase is the costs for a large new customer connection. These costs were offset by capital contributions.

Cost Control

Efficiency Assessment

- The total cost and efficiency estimates use complex calculations that were developed by an independent third party consultant of the OEB, Pacific Energy Group (PEG) to produce a single efficiency ranking. The electricity distributors are divided into five groups based on the magnitude of the difference between their respective individual actual and predicted costs. For seven years in a row, from 2012 to 2018, Sioux Lookout Hydro was placed in Group 3, where a Group 3 distributor is defined as having actual costs within +/- 10 percent of predicted costs. Group 3 is considered "average efficiency" in other words, Sioux Lookout Hydro costs are within the average cost range for distributors in the Province of Ontario.
- For 2020 Sioux Lookout Hydro achieved actual costs that were 25.8% less than predicted costs. This is an improvement over 2019
 where the actual costs were 19% less than predicted costs. Therefore, Sioux Lookout Hydro continues to be placed into Group 2 for

2020 Scorecard MD&A Page 7 of 8

the 2021 Stretch Factor ranking. A Group 2 Distributor is defined as having actual costs from 10% to 25% less than predicted costs. The average three-year ranking is used to determine which group the Distributor will be placed in. For 2017-2019 predicted costs averaged (14.6)% and for 2018-2020 the average was (20.6)%.

Although Sioux Lookout Hydro's forward- looking goal is to advance to the "more efficient" group, management's expectation is that
efficiency performance will be within +/- 10 percent of predicted costs, with the goal being less 10% than predicted costs.

Total Cost per Customer

- The total cost per customer is calculated as the sum of Sioux Lookout Hydro's capital and operating costs and dividing this cost figure by the total number of customers that Sioux Lookout Hydro serves. Sioux Lookout Hydro's total cost per customer remained relatively stable over 2016 through to 2020.
- Sioux Lookout Hydro will continue to seek ways to become more efficient in its operations in order to reduce operating costs. We have found sharing services among the other Northwest LDCs allows us to achieve savings and will continue to seek ways to partner together in order to reduce costs.

Total Cost per Km of Line

- This measure uses the same total cost that is used in the Cost per Customer calculation above. The Total cost divided by the kilometers of line that Sioux Lookout Hydro operates to serve its customers. The figure for 2017 is reduced significantly from prior year reporting. This is due to implementing a new mapping system which allows for more detailed records, as well as a review of the CEA definition which uncovered that Sioux Lookout Hydro was utilizing the road Km of line as its metric when circuit Km of line was the correct figure. This resulted in an increase of Km of line reported from 322 Km to 711 Km and a decrease in cost per Km of Line by \$5,255 in 2017. In 2020 the cost per Km of line is in line with 2017 to 2019.
- Sioux Lookout Hydro will continue to seek ways to become more efficient in its operations in order to reduce operating costs. We have found sharing services among the other Northwest LDCs allows us to achieve savings and will continue to seek ways to partner together in order to reduce costs.

2020 Scorecard MD&A Page 8 of 8

Connection of Renewable Generation

- Renewable Generation Connection Impact Assessments Completed on Time Electricity distributors are required to conduct Connection Impact Assessments (CIAs) within 60 days of receiving the authorization from the Electrical Safety Authority. Sioux Lookout Hydro had only one request in 2020 to connect a generation project over 10 kW. This was completed on time.
- New Micro-embedded Generation Facilities Connected On Time
 In 2020 Sioux Lookout Hydro did not have any requests to connect micro-embedded generation facilities.

Financial Ratios

Liquidity: Current Ratio (Current Assets/Current Liabilities)

As an indicator of financial health, a current ratio that is greater than 1 is considered good as it indicates that the company can pay its short term debts and financial obligations. Companies with a ratio of greater than 1 are often referred to as being "liquid". The higher the number, the more "liquid" and the larger the margin of safety to cover the company's short-term debts and financial obligations.

Sioux Lookout Hydro's liquidity is currently at 0.74. This has decreased from .87 from 2019. Sioux Lookout Hydro attributes the decrease to factors relating to more tightly aligning its revenue and expenses through the implementation of the new Accounting Guidelines related to Cost of Power Accounts 1588 and 1589 and more closely aligning its Line Loss adjustment factor to actual line loss for the purpose of billing customers. Sioux Lookout Hydro continually monitors its short term assets to ensure that all of its short term obligations are met and to maintain a liquidity ratio of as close to 1 as possible.

• Leverage: Total Debt (includes short-term and long-term debt) to Equity Ratio
Sioux Lookout Hydro's debt to equity ratio has remained stable from 2016 to 2020. The current OEB deemed debt to equity ratio is 1.5.

The Distribution System Plan was in its first year in 2018, and Sioux Lookout Hydro took on additional long-term debt to finance the

2020 Scorecard MD&A Page 9 of 8

replacement of key equipment. Over the next few years, SLHI will be acquiring additional long term debt to implement the vehicle replacement program. This will increase the debt to equity ratio somewhat.

Profitability: Regulatory Return on Equity – Deemed (included in rates)

The 9.00% deemed rate of return was established during Sioux Lookout Hydro's last cost of service rate application for 2018 rates in decision EB-2017-0073. The deemed rate of return is adjusted by the Ontario Energy Board (OEB) each time the utility submits a cost of service rate application. The OEB allows a distributor to earn within +/- 3% of the expected return on equity. When a distributor performs outside of this range, the actual performance may trigger a regulatory review of the distributor's revenues and costs structure by the OEB.

Profitability: Regulatory Return on Equity – Achieved

In 2020, Sioux Lookout Hydro under-achieved the deemed return on equity by 0.93%. As expected, the achieved Regulated Return on Equity was within the +/- 3% deadband.

2020 Scorecard MD&A Page 10 of 8

Note to Readers of 2020 Scorecard MD&A

The information provided by distributors on their future performance (or what can be construed as forward-looking information) may be subject to a number of risks, uncertainties and other factors that may cause actual events, conditions or results to differ materially from historical results or those contemplated by the distributor regarding their future performance. Some of the factors that could cause such differences include legislative or regulatory developments, financial market conditions, general economic conditions and the weather. For these reasons, the information on future performance is intended to be management's best judgement on the reporting date of the performance scorecard, and could be markedly different in the future.

2020 Scorecard MD&A Page 11 of 8
