## **DECISION AND PROCEDURAL ORDER NO. 6**

In the Ontario Energy Board's (the "Board") recent partial decision in Enbridge Gas Distribution's ("EGDI") 2006 rates application (EB-2005-0001 / EB-2005-0437), the Board announced its intention to convene a generic proceeding to address a number of current and common issues related to demand side management ("DSM") activities for natural gas utilities. A hearing to consider these matters was held from July 10, 2006 to July 28, 2006.

On August 25, 2006 the Board released its decision on the first phase of the EB-2006-0021 proceeding. As part of its decision, the Board indicated that it would convene a second phase to the hearing for the purpose of determining common input assumptions

to be used by EGDI and Union Gas Limited (together the "Companies") when compiling their DSM plans.

The Board circulated a draft input assumptions list in Procedural Order Number 5. This draft list was filed by the Companies in the first phase of the proceeding. The draft input assumptions list was accompanied by substantiation documentation also provided by the Companies.

A Settlement Conference was held with the objective of achieving agreement on as many of the input assumptions as possible. A complete Settlement Proposal was filed with the Board on October 5, 2006 and is attached as Appendix A.

The Board has reviewed the Settlement Proposal and finds that all of the proposals contained within it to be reasonable and accepts the Settlement Proposal as filed.

Intervenors eligible for cost awards shall file their cost claims by November 8, 2006 in accordance with the Board's Practice Direction on Cost Awards. The Companies may comment on these claims by November 15, 2006. The cost award applicants may respond to the Companies comments by November 22, 2006. The Companies shall pay in equal amounts the intervenor costs to be awarded by the Board in a subsequent decision, as well as any incidental Board costs.

#### **THE BOARD ORDERS THAT:**

- 1) The Companies shall file applications for approval of their respective DSM plans, incorporating the Phase 1 and Phase 2 Decisions with the Board and Intervenors, no later than Tuesday, November 21, 2006.
- 2) Intervenors who wish to comment on the Companies' DSM plans shall file those comments with the Board and the other Intervenors on or before Tuesday, December 5, 2006.
- 3) **All filings with the Board noted in the Order must be in the form of 10 hard copies and received by the Board by 5:00 p.m. on the stated date.** The Board requires all correspondence to be in electronic form as well as paper. Therefore, all parties must also e-mail an electronic copy of their filings in MS

Word to the Board Secretary at [Boardsec@oeb.gov.on.ca](mailto:Boardsec@oeb.gov.on.ca). Parties must also include the Case Manager, Michael Bell [michael.bell@oeb.gov.on.ca](mailto:michael.bell@oeb.gov.on.ca) and Board Counsel, Michael Millar [michael.millar@oeb.gov.on.ca](mailto:michael.millar@oeb.gov.on.ca) on all electronic correspondence related to this case.

**SETTLEMENT PROPOSAL  
COMPLETELY SETTLED ISSUES**

**TABLE OF CONTENTS**

<b><u>Description</u></b>	<b><u>Page</u></b>
<b>Introduction and Context</b>	<b>3</b>
<b>Appendix A: List of Input Assumptions</b>	
<b>Appendix B: Substantiation Documentation</b>	

## INTRODUCTION AND CONTEXT

This Settlement Proposal is filed with the Ontario Energy Board (the "Board") in connection with the Board's proceeding, commenced on its own motion, regarding natural gas demand side management ("DSM"). By Procedural Order No. 5, the Board convened a second phase to this proceeding for the purposes of determining common input assumptions to be used by the Utilities when compiling their DSM plans. The Board appended to this Procedural Order a draft input assumptions list and the substantiation documentation provided by the Utilities. The Procedural Order required parties to review the assumptions list (and a freeridership rate of 30% for custom projects) with a view to attempting to agree upon as many assumptions as possible through a settlement conference. This Settlement Proposal is filed jointly by Enbridge Gas Distribution Inc. ("EGD") and Union Gas Limited ("Union") (jointly referred to as the "Utilities").

A Settlement Conference for Phase II of this proceeding was conducted on September 25 and 25, 2006, in accordance in the *Ontario Energy Board's Rules of Practice and Procedure* (the "Rules") and the Board's *Settlement Conference Guidelines* ("Settlement Guidelines"). This Settlement Proposal arises from the Settlement Conference.

EGD, Union, and the following intervenors (collectively, the "parties"), as well as Ontario Energy Board hearing staff ("Board Staff"), participated in the Settlement Conference:

- Consumers Council of Canada ("CCC")
- Energy Probe Research Foundation ("Energy Probe")
- Green Energy Coalition ("GEC")
- Industrial Gas Users Association ("IGUA")
- London Property Management Association ("LPMA")
- Low Income Energy Network ("LIEN")
- Pollution Probe
- School Energy Coalition ("Schools")
- Vulnerable Energy Consumers Coalition ("VECC")

This Settlement Proposal constitutes a complete settlement because the Utilities and all of the other parties who participated in the settlement conference agree with this Settlement Proposal. All parties participated in the negotiation of this Settlement Proposal. Board Staff take no position and as a result, are not a party to the Settlement Proposal.

It is acknowledged and agreed that none of the provisions of this Complete Settlement are severable. If the Board does not accept this Settlement Proposal in its entirety, there is no Settlement Proposal (unless the parties agree that any

portion of the Settlement Proposal that the Board does accept may continue as a valid Settlement Proposal).

The role adopted by Board Staff in Settlement Conferences is set out on page 5 of the Board's *Settlement Conference Guidelines*, "Board Staff who participate in the settlement conference are bound by the same confidentiality standards that apply to parties to the proceeding."

It is further acknowledged and agreed that parties will not withdraw from this Settlement proposal under any circumstances except as provided under Rule 32.05 of the Rules.

It is also acknowledged and agreed that the values in the list of input assumptions attached to the Settlement Proposal have been developed and agreed to by the parties in the context of the design of existing programs. Some of these values are sensitive to program design. The parties anticipate that these values will be applicable to the multi-year plans to be filed by the Utilities for the multi-year period beginning in 2007. In the event that either Utility proposes programs which are sufficiently different from those which were used in the development of the list of input assumptions that any of these assumptions are no longer appropriate, then consistent with issue 3.1 of the Board's decision in Phase 1 of this proceeding, the applicable input assumptions should be assessed for reasonableness prior to approval of the multi-year plan.

The agreed upon list of input assumptions is attached as Appendix "A" to this Settlement Proposal. Best efforts have been made to identify all of the evidence which supports the values contained in the list of input assumptions in the Substantiation Documentation appended to this Settlement Proposal as Appendix "B". Parties have made best efforts to rely upon the best available data at this time for the establishment of the values set out in Appendix "A". Where utilities intend to no longer undertake a program or to significantly change a program's description, programs have been removed from the attached list of input assumptions.

Many of the input assumptions which were the subject of this phase of the proceeding have been subjected to review by the parties and approval by the Board in prior proceedings. The Settlement Conference afforded parties an opportunity to further review those and other input assumptions, ask questions, and explain their position in respect of same. As a result, some input assumptions that have been approved in prior proceedings have been changed.

**Appendix A: Input Assumptions**

			Resource Savings Assumptions							
Efficient Equipment & Technologies	Base Equipment & Technologies	Load Type	Natural Gas	Electricity	Water	Equipment Life Years	Incremental Cost		Free Ridership %	Comment
			m3	kWh	L		Customer Installed	Contractor Installed

<b>COMMERCIAL/INDUSTRIAL CUSTOM PROJECTS</b>										
1. Custom Projects									30%	<p>The 30% freerider rate is an interim assumption until further evaluation work is done on a priority basis on the custom project free rider rate. The Utilities recognize that an internal guideline and enhanced validation process was in place at Enbridge when parties agreed to the 30% free rider rate in prior proceedings. For example, this guideline was shown in EGD's evidence in the RP-2003-0203 proceeding at Exhibit A7, Tab 2, Schedule 1, Page 9 of 19 and states:</p> <p>"Enbridge Gas Distribution will provide \$0.05 per m3 of gas saved for higher efficiency boilers in projects that are cost effective using the Societal Cost Test and that have a simple payback of not less than two years for Industrial Projects and 1-1/2 years for Commercial Projects."</p> <p>The Utilities will continue their current practice in this regard but reserve their right to revisit validation mechanisms and criteria as required.</p>

## HIGH EFFICIENCY FURNACE

<b>Efficient Technology &amp; Equipment Description</b>
High efficiency furnace (90% AFUE)
<b>Base Technology &amp; Equipment Description</b>
Mid efficiency furnace (80% AFUE)

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>226 m<sup>3</sup></b>
Natural gas savings claims are based on HOT2000 V 9.1 assessment for Union Gas franchise territory <sup>5</sup> . The assessment is based on 1800 ft <sup>2</sup> single-story house located in London (Union Gas South) and North Bay (Union Gas North) built in 2003, with 3 occupants, partially insulated heated basement. The base technology in this assessment is a mid-efficiency furnace (80% AFUE, single-stage, fan assisted with a conventional blower). The higher efficient technology in this assessment is a high efficiency furnace (90% AFUE, single-stage, fan assisted with a conventional blower). The single savings number is weighted average of Union Gas South (70%) and Union Gas North (30%) savings estimates.	
<b>Electricity</b>	<b>n/a kWh</b>
<b>Water</b>	<b>n/a L</b>

### Other Input Assumptions

<b>Equipment Life</b>	<b>18 years</b>
High efficiency furnaces have an estimated service life of 18 years. <sup>6,7</sup>	
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>- \$647</b>
The incremental cost is based on a pricing survey of 15 contractors in the Union Gas franchise area. The single incremental cost number is weighted average of Union Gas South (70%) and Union Gas North (30%) average incremental costs.	
<b>Free Ridership</b>	<b>60* %</b>
Free-ridership rate adjusted during ADR Settlement – September 2006.	

<sup>5</sup> Furnace Savings Update – 2004”, John Overall, Union Gas, January 2004.

<sup>6</sup> ASHRAE Applications Handbook – 2003, Chapter 36 – Owning and Operating Costs, Table 3.

<sup>7</sup> “The Life Expectancy/Replacement Picture”, Appliance Magazine, September 2005.

## HIGH EFFICIENCY INTEGRATED APPLIANCE

<b>Efficient Technology &amp; Equipment Description</b>
High efficiency integrated appliance (90% AFUE, EF = 0.65)
<b>Base Technology &amp; Equipment Description</b>
Mid efficiency furnace (80% AFUE) with storage tank water heater (EF = 0.59)

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>287 m<sup>3</sup></b>
Natural gas savings claims are based on HOT2000 V 9.1 analysis for Union Gas franchise territory. The assessment is based on 1800 ft <sup>2</sup> single-story house located in London (Union Gas South) and North Bay (Union Gas North) built in 2003, with 3 occupants, partially insulated heated basement. The base technology in this assessment is a mid-efficiency furnace (80% AFUE, single-stage, fan assisted with a conventional blower) and a conventional (PV 50) storage tank water heater (EF = 0.59). The higher efficient technology in this assessment is a high efficiency integrated appliance (90% AFUE and EF = 0.65 – minimum to meet P.10 standard for integrated appliance). The single savings number is weighted average of Union Gas South (70%) and Union Gas North (30%) savings estimates.	
<b>Electricity</b>	<b>n/a kWh</b>
<b>Water</b>	<b>n/a L</b>

### Other Input Assumptions

<b>Equipment Life</b>	<b>18 years</b>
Equipment life is estimated to be similar to tankless water heater – approximately 18 years.	
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>- \$850</b>
The incremental cost is estimated to be \$850.	
<b>Free Ridership</b>	<b>1* %</b>
Free-ridership rate adjusted during ADR Settlement – September 2006.	

\*indicates assumption has changed from previously filed Substantiation Document.

## ENERGUIDE FOR NEW HOUSES

<b>Efficient Technology &amp; Equipment Description</b>	
EnerGuide for New Houses	
<b>Base Technology &amp; Equipment Description</b>	
Home built to Ontario Building Code (1997) minimum standards.	

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>517* m<sup>3</sup></b>
Natural gas savings based on EnerQuality Corporation data and EGD load research.	
<b>Electricity</b>	<b>n/a kWh</b>
<b>Water</b>	<b>n/a L</b>

### Other Input Assumptions

<b>Equipment Life</b>	<b>25 years</b>
New homes have an estimated service life of 25 years before major repair or renovations are expected.	
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>- \$2000</b>
Estimated incremental cost as compared to costs for Energy Star New Homes and as approved in the 2006 Enbridge DSM Plan (EB-2005-0001).	
<b>Free Ridership</b>	<b>5* %</b>
Free-ridership rate adjusted during ADR Settlement – September 2006.	

\*indicates assumption has changed from previously filed Substantiation Document.

## PROGRAMMABLE THERMOSTAT

<b>Efficient Technology &amp; Equipment Description</b>
Programmable thermostat
<b>Base Technology &amp; Equipment Description</b>
Standard thermostat

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>150* m<sup>3</sup></b>
Natural gas savings adjusted for new OBC during ADR Settlement – September 2006.	
<b>Electricity</b>	<b>200 kWh</b>
The electricity savings are based on percentage savings (11% - corresponding to a 25°C day set-forward), reported in CCHT report <sup>8</sup> . An NRCan report on energy efficiency trends in Canada states that “A central air conditioner is used to cool a larger space such as a house. This type of unit (32,000 Btu per hour) can use about 1969 to 2317 kWh in a cooling season.” <sup>9</sup> The average consumption is 2143 kWh. The savings from a 25°C set-forward strategy is taken as 10% of 2000 kWh, that is, 200 kWh.	
<b>Water</b>	<b>n/a L</b>

### Other Input Assumptions

<b>Equipment Life</b>	<b>18 years</b>
Programmable thermostats have an estimated service life of 18 years (assumed to have the same life as a furnace).	
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>- \$65</b>
Based on average thermostat cost from Enbridge survey of major home renovation and hardware chains.	
<b>Free Ridership</b>	<b>30 %</b>
Free-ridership rate as per 2005 ADR Settlement – EB-2005-0211. <sup>10</sup>	

<sup>8</sup> Manning, M.M; Swinton, M.C.; Szadkowski, F.; Gusdorf, J.; Ruest, K., “The Effects of Thermostat Setting on Seasonal Energy Consumption at the CCHT Research Facility”, IRC-RR 191, February 14, 2005.

<sup>9</sup> “Energy Efficiency Trends in Canada, 1990 to 2003”, Natural Resources Canada, June 2005.

<sup>10</sup> EB-2005-0211, Union Gas Settlement Agreement, April 7, 2005.

\*indicates assumption has changed from previously filed Substantiation Document.

## TANKLESS WATER HEATER

<b>Efficient Technology &amp; Equipment Description</b>
Tankless water heater (EF = 0.82)
<b>Base Technology &amp; Equipment Description</b>
Storage tank water heater (EF = 0.58)

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>206 m<sup>3</sup></b>
Natural gas savings claims are based calculations using the U.S. Department of Energy's Water Heater Analysis Model <sup>11</sup> . Calculations use assumptions of a typical family of 2.7 (assumed to use 2.7/4 of the nominal water use of a typical family of 4, i.e. 64.3 gallons x (2.7/4) = 43.4 gallons = 164 L) <sup>12</sup> . Differences in inlet water temperature between Union South (London) and Union North (North Bay) result in negligible differences in natural gas savings (1 m3). The lower (Union South) of the two savings estimates was used as the savings claim.	
<b>Electricity</b>	<b>n/a kWh</b>
<b>Water</b>	<b>n/a L</b>

### Other Input Assumptions

<b>Equipment Life</b>	<b>20 Years</b>
Tankless water heaters have an estimated service life of 20 years <sup>13,14</sup> .	
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>- \$650</b>
Tankless water heaters have an equipment life that is approximately twice that of a conventional storage tank water heater. A representative tankless water heater (Rinnai 2532 FFU) has an installed cost of \$1800 <sup>15</sup> compared with a PV50 from Union Energy at \$850. Assuming a purchase of a second conventional tank type water heater will be required in 10 years at a cost in current dollars of approximately \$300 ( $\approx \$850/[1.1^{10}]$ ), the incremental cost of a tankless water heater is $\$1800 - \$850 - \$300 = \$650$ .	
<b>Free Ridership</b>	<b>2* %</b>
Free-ridership rate adjusted during ADR Settlement – September 2006. Nominal free-ridership included pending better information developed through the Evaluation and Audit Committee process.	

<sup>11</sup> Technical Support Document: Energy Efficiency Standards for Consumer Products – Residential Water Heaters, Appendix D-2, Water Heater Analysis Model, U.S. December 2000.

\*indicates assumption has changed from previously filed Substantiation Document.

## WASTE WATER HEAT RECOVERY

<b>Efficient Technology &amp; Equipment Description</b>
Waste water heat recovery
<b>Base Technology &amp; Equipment Description</b>
No waste water heat recovery

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>267 m<sup>3</sup></b>
Natural gas savings claims are based on a Natural Resources Canada (NRCAN) document describing waste water heat recovery system energy credits for houses. NRCAN provides a savings credit of 10.1 GJ (~ 267 m3) for a natural gas heated domestic water hot water system <sup>16</sup> .	
<b>Electricity</b>	<b>n/a kWh</b>
<b>Water</b>	<b>n/a L</b>

### Other Input Assumptions

<b>Equipment Life</b>	<b>30 years</b>
Waste water heat recovery systems have an estimated service life of 30+ years <sup>17</sup> .	
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>- \$625</b>
Enbridge reference from analysis of ET field installations. DOE reports "Prices for drain-water heat recovery systems range from \$300 to \$500. You'll need a qualified plumbing and heating contractor to install the system. Installation will usually be less expensive in new home construction." <sup>18</sup>	
<b>Free Ridership</b>	<b>1* %</b>
Free-ridership rate adjusted during ADR Settlement – September 2006. Nominal free-ridership included pending better information developed through the Evaluation and Audit Committee process.

## **RESIDENTIAL - EXISTING HOMES**

\*indicates assumption has changed from previously filed Substantiation Document.

## ENERGY STAR CLOTHES WASHER

Efficient Technology & Equipment Description	
Energy Star clothes washer	
Base Technology & Equipment Description	
Standard clothes washer	

### Resource Savings Assumptions

Natural Gas	55 m <sup>3</sup>
Natural gas savings claims are determined from the U.S. Department of Energy's / Energy Star "Life Cycle Cost Estimate for Energy Star Qualified Residential Clothes Washer" <sup>19</sup> . This calculation assumes 8 loads of laundry per week with gas water heating. "The best energy performers are ENERGY STAR qualified clothes washers, which use 35 to 50 percent less water and at least 50 percent less energy per load than other washers. Presently, only standard-size clothes washers with minimum tub capacities of 45 L (1.6 cu. ft.) qualify for the ENERGY STAR mark. ENERGY STAR qualified clothes washers are available in both top- and front-loading models" <sup>20</sup> .	
Electricity	31 kWh
Electricity savings claims are determined from the U.S. Department of Energy's / Energy Star "Life Cycle Cost Estimate for Energy Star Qualified Residential Clothes Washer" <sup>19</sup> .	
Water	28,731 L
Water savings claims are determined from the U.S. Department of Energy's / Energy Star "Life Cycle Cost Estimate for Energy Star Qualified Residential Clothes Washer" <sup>19</sup> .	

### Other Input Assumptions

Equipment Life	13 years
Energy Star clothes washers have an estimated service life of 13 years.	
Incremental Cost (Cust. / Contr. Install)	- \$350
Incremental cost is based on based a MoneySense article. <sup>21</sup> The American Council for an Energy Efficient Economy (ACEEE) reports an incremental cost of \$200. <sup>22</sup>	
Free Ridership	8 %
Free-ridership rate as per 2005 ADR Settlement – EB-2005-0211 for front load washers. <sup>23</sup>	

<sup>19</sup> [http://www.energystar.gov/ia/business/bulk\\_purchasing/bpsavings\\_calc/CalculatorConsumerClothesWasher.xls](http://www.energystar.gov/ia/business/bulk_purchasing/bpsavings_calc/CalculatorConsumerClothesWasher.xls)

<sup>23</sup> EB-2005-0211, Union Gas Settlement Agreement, April 7, 2005.

\*indicates assumption has changed from previously filed Substantiation Document.

## ENERGY STAR WINDOW

Efficient Technology & Equipment Description	
Energy Star window	
Base Technology & Equipment Description	
Standard window - double glazed, 12mm gap, no inert gas fill or low-e coating (approx R2)	

### Resource Savings Assumptions

Natural Gas	13 m <sup>3</sup>
Natural gas savings claims were derived from HOT2XP simulations using typical existing home characteristics for the Union Gas franchise area <sup>24</sup> . Full descriptions of assumption are in Union Gas internal report <sup>25</sup> . The single savings number is weighted average of Union Gas South (70%) and Union Gas North (30%) savings estimates.	
Electricity	16 kWh
Electricity savings claims are based on information in Natural Resources Canada report <sup>26</sup> . Space Cooling savings for Union South (zone B) and Union North (zone C) were reported as space cooling: 54 MJ/m <sup>2</sup> and 50 MJ/m <sup>2</sup> respectively. Standard window is 1.1 m <sup>2</sup> so space cooling electrical savings are calculated as follows: $(54 \text{ MJ/m}^2) \times (1.1 \text{ m}^2/\text{window}) / (3.6 \text{ MJ/kWh}) = 16.5 \text{ kWh/window}$ $(50 \text{ MJ/m}^2) \times (1.1 \text{ m}^2/\text{window}) / (3.6 \text{ MJ/kWh}) = 15.3 \text{ kWh/window}$ The single savings number is weighted average of Union Gas South (70%) and Union Gas North (30%) savings estimates.	
Water	n/a L

### Other Input Assumptions

Equipment Life	25 years
Energy Star windows have an estimated service life of 25 years.	
Incremental Cost (Cust. / Contr. Install)	- \$52
Incremental cost is based Natural Resource Canada report <sup>26</sup> . $\$43.75/\text{m}^3 \text{ (South)} \times (1.1 \text{ m}^2/\text{window}) = \$48/\text{window}$ $\$54.89/\text{m}^3 \text{ (North)} \times (1.1 \text{ m}^2/\text{window}) = \$60/\text{window}$ The single incremental cost number is weighted average of Union Gas South (70%) and Union Gas North (30%) incremental costs.	
Free Ridership	80* %
Free-ridership rate adjusted during ADR Settlement – September 2006, based on Marbek study.	

<sup>24</sup> Furnace Savings Update – 2004”, John Overall, Union Gas, January 2004.

<sup>25</sup> “Rationale Behind Natural Gas (and Electrical) Savings Attributed to Upgrading Base-Technology Windows (R-2) to Energy Star® Rated Windows”, Darryl Yahoda – Union Gas, August 2004.

<sup>26</sup> “Potential Savings for Energy Star Windows, Doors, and Skylights”, Natural Resources Canada – prepared by Enermodal Engineering, January 2005.

\*indicates assumption has changed from previously filed Substantiation Document.

## ENHANCED FURNACE

<b>Efficient Technology &amp; Equipment Description</b>	
High efficiency furnace with ECM	
<b>Base Technology &amp; Equipment Description</b>	
Mid efficiency furnace w/o PSC	

### Resource Savings Assumptions - (Furnace / ECM)

<b>Natural Gas</b>	<b>385 / -65 m<sup>3</sup></b>
Impact on natural gas use from an ECM and the resulting decrease in savings from a high efficiency furnace are based on the Final Report on ECM Motors by the Canadian Centre for Housing Technology. Using the Enbridge high-efficiency furnace savings number of 385m <sup>3</sup> , the net gas savings are reduced to 320m <sup>3</sup> .	
<b>Electricity</b>	<b>0 / 730 kWh</b>
Canadian Centre for Housing Technology – Final Report on the Effects of ECM Furnace Motors on Electricity and Gas Use: Results from the CCHT Research Facility and Projections.	
<b>Water</b>	<b>n/a L</b>

### Other Input Assumptions - (Furnace / ECM)

<b>Equipment Life</b>	<b>18 years</b>
Enhanced furnaces have an estimated service life of 18 years. <sup>27</sup>	
<b>Incremental Cost</b>	<b>- \$650/\$550</b>
Enhanced furnaces have an estimated incremental cost of \$1200.	
<b>Free Ridership</b>	<b>48* / 15* %</b>
Free-ridership rate adjusted during ADR Settlement – September 2006.	

<sup>27</sup> ASHRAE Applications Handbook – 2003, Chapter 36 – Owning and Operating Costs, Table 3.

\*indicates assumption has changed from previously filed Substantiation Document.

## FAUCET AERATOR

<b>Efficient Technology &amp; Equipment Description</b>
Faucet Aerator
<b>Base Technology &amp; Equipment Description</b>
Standard faucet without aerator

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>14* m<sup>3</sup></b>
Natural gas savings as per Summit Blue recommendation – UG 2005 Audit.	
<b>Electricity</b>	<b>n/a kWh</b>
<b>Water</b>	<b>6,520* L</b>
Water savings as per Summit Blue recommendation – UG 2005 Audit.	

### Other Input Assumptions

<b>Equipment Life</b>	<b>10 years</b>
Faucet aerators have an estimated service life of 10 years. <sup>28</sup>	
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>\$2                      \$3</b>
Incremental cost is based on invoice for aerators purchased for Union Gas' ESK kits - Kitchen Delux Aerator (\$1.90) and Dual Basin Aerator (1.0 GPM) (\$0.48). A cost of \$2 was used.	
<b>Free Ridership</b>	<b>10 %</b>
As approved in the Enbridge Partial Decision EB 2005-0001.	

<sup>28</sup> U.S. DOE – FEMP, Energy Cost Calculator for Faucets and Showerheads, <http://www.eere.energy.gov/femp>

\*indicates assumption has changed from previously filed Substantiation Document.

## HIGH EFFICIENCY FURNACE

<b>Efficient Technology &amp; Equipment Description</b>
High efficiency furnace
<b>Base Technology &amp; Equipment Description</b>
Mid-efficiency furnace

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>385 m<sup>3</sup></b>
Natural gas savings are based on Enbridge research that indicates the average consumption for a mid-efficiency furnace is 2,430 m <sup>3</sup> and 2,045 m <sup>3</sup> for a high efficiency furnace, suggesting annual savings of 385 m <sup>3</sup> as approved in the Decision for the Enbridge 2006 DSM plan (EB-2005-0001).	
<b>Electricity</b>	<b>n/a kWh</b>
<b>Water</b>	<b>n/a L</b>

### Other Input Assumptions

<b>Equipment Life</b>	<b>18 years</b>
High efficiency furnaces have an estimated service life of 18 years. <sup>29</sup>	
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>- \$650</b>
The incremental cost is based on a pricing survey of 15 contractors in the Union Gas franchise area. The single incremental cost number is weighted average of Union Gas South (70%) and Union Gas North (30%) average incremental costs.	
<b>Free Ridership</b>	<b>48 %</b>
Estimate based on discrete choice modelling framework as reported in Appendix A of the 1999 DSM Plan (EBRO 497, Exhibit D2, Tab 6, Schedule 1).	

<sup>29</sup> ASHRAE Applications Handbook – 2003, Chapter 36 – Owning and Operating Costs, Table 3.

\*indicates assumption has changed from previously filed Substantiation Document.

## HOME REWARDS w/o PROGRAMMABLE THERMOSTAT

<b>Efficient Technology &amp; Equipment Description</b>
<b>Base Technology &amp; Equipment Description</b>
Existing Home Sample

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>1,321 m<sup>3</sup></b>
Based on the results from the Peterborough Project.	
<b>Electricity</b>	<b>300 kWh</b>
Based on the results from the Peterborough Project.	
<b>Water</b>	<b>n/a L</b>

### Other Input Assumptions

<b>Equipment Life</b>	<b>25 years</b>
Estimated service life of retrofit measures.	
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>- \$2,708</b>
As approved in the 2006 Enbridge DSM based on a detailed survey of EnerGuide for Houses retrofits as reported in EB-2005-0001 J36.1	
<b>Free Ridership</b>	<b>8 %</b>
Free-ridership is based on the results from the Peterborough Project. Attribution of 50% as per Partial Decision for Enbridge 2006 DSM Plan (EB 2005-0001).	

\*indicates assumption has changed from previously filed Substantiation Document.

## LOW-FLOW SHOWERHEAD (per household)

<b>Efficient Technology &amp; Equipment Description</b>
Low-flow showerhead
<b>Base Technology &amp; Equipment Description</b>
Based on contractor testing and replacement of high flow units.

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>115* m<sup>3</sup></b>
September 2006 ADR agreement.	
<b>Electricity</b>	<b>n/a kWh</b>
<b>Water</b>	<b>30,966* L</b>
September 2006 ADR agreement.	

### Other Input Assumptions

<b>Equipment Life</b>	<b>10 Years</b>
Low flow showerheads have an estimated service life of 10 years.	
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>- \$15</b>
A cost of \$5.00 was used. Enbridge reports \$10 installation fee for showerhead program.	
<b>Free Ridership</b>	<b>10 %</b>
As approved in the Enbridge Partial Decision EB 2005-0001.	

\*indicates assumption has changed from previously filed Substantiation Document.

## LOW-FLOW SHOWERHEAD (per showerhead)

<b>Efficient Technology &amp; Equipment Description</b>
Low-flow showerhead
<b>Base Technology &amp; Equipment Description</b>
Average existing stock (higher flow showerhead)

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>91* m<sup>3</sup></b>
Natural gas savings claims <sup>30</sup> are based on the reduction of hot water use achieved by switching from an average existing stock flow showerhead (3.75 USGPM) to a low-flow showerhead (2.0 USGPM). Savings are based on the assumption of 7 showers / week per showerhead (48 weeks/year) with an average showering time of 8 minutes <sup>31</sup> . Average existing stock showerheads are reported as 17.1 L/min (4.5 USGPM) by Environment Canada <sup>32</sup> and 14.8 L/min (3.9 USGPM) by the City of Toronto <sup>33</sup> . Natural gas savings as per Summit Blue recommendation – UG 2005 Audit.	
<b>Electricity</b>	<b>n/a kWh</b>
<b>Water</b>	<b>19,354* L</b>
Water savings claims <sup>30</sup> are based on the reduction of water use (hot & cold) achieved by switching from a standard flow showerhead (3.75 USGPM) to a low-flow showerhead (2.0 USGPM). Natural gas savings as per Summit Blue recommendation – UG 2005 Audit.	

### Other Input Assumptions

<b>Equipment Life</b>	<b>10 years</b>
Low flow showerheads have an estimated service life of 10 years.	
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>\$5 -</b>
Invoice for ESK kits (Home Depot) has shower head cost of \$3.15. <sup>34</sup> A cost of \$5.00 was used. Enbridge reports \$10 installation fee for showerhead program.	
<b>Free Ridership</b>	<b>17.5* %</b>
Free-ridership rate adjusted (+7.5%) during ADR Settlement – September 2006 to reflect the uncertainty of whether existing low-flow showerheads were being replaced with new low-flow showerheads.	

<sup>30</sup> Low flow showerhead savings spreadsheet

<sup>31</sup> Region of Waterloo, <http://region.waterloo.on.ca>

<sup>32</sup> Environment Canada, [http://www.ec.gc.ca/water/images/manage/effic/e\\_shower.htm](http://www.ec.gc.ca/water/images/manage/effic/e_shower.htm)

<sup>33</sup> City of Toronto, [http://www.city.toronto.on.ca/watereff/water\\_saving\\_kits/indoor\\_kit.htm](http://www.city.toronto.on.ca/watereff/water_saving_kits/indoor_kit.htm)

<sup>34</sup> Home Depot ESK invoice

\*indicates assumption has changed from previously filed Substantiation Document.

## PIPE INSULATION

<b>Efficient Technology &amp; Equipment Description</b>
Conventional storage tank water heater w/o pipe insulation
<b>Base Technology &amp; Equipment Description</b>
Conventional storage tank water heater with pipe insulation

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>17 m<sup>3</sup></b>
Natural gas savings are based on : <ul style="list-style-type: none"> <li>• City of Berkeley Energy &amp; Sustainable Development estimates up to 14 therms/year or 40 m3 of gas/year<sup>35</sup></li> <li>• Amalgamated Laboratories<sup>36</sup> reported that 35ft of ¾" copper pipe lost 3.14 kW/day more with un-insulated pipe than when insulated. This corresponds to 10,700 Btu/day for 35 feet or 1,000 Btu/M/d. Thus 2m of insulation might save 1,000 Btu/m/d* 2m*365*(1m3/35,300 Btu) = 21 m3. This is for a forced circulation system, natural convection would use less. Assuming 80% of the loss of a forced circulation system would give 21*.8 = 17 m3/y</li> </ul>	
<b>Electricity</b>	<b>n/a kWh</b>
<b>Water</b>	<b>n/a L</b>

### Other Input Assumptions

<b>Equipment Life</b>	<b>15 years</b>
Pipe insulation has an estimated service life of 15 years.	
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>\$1                      \$4</b>
Invoice for ESK kits (Home Depot) has a pipe insulation cost of \$0.29/m. <sup>37</sup> Union provides 2 m and Enbridge provides 3 m. Enbridge reports \$3 installation fee for pipe insulation.	
<b>Free Ridership</b>	<b>4 %</b>
Free-ridership rate as per Enbridge 2003 ADR Settlement (RP2002-0133).	

<sup>35</sup> City of Berkeley & Sustainable Development

<sup>36</sup> <http://www.envirotech.com/tests.html>

<sup>37</sup> Home Depot ESK invoice

\*indicates assumption has changed from previously filed Substantiation Document.

## PROGRAMMABLE THERMOSTAT

<b>Efficient Technology &amp; Equipment Description</b>
Programmable thermostat
<b>Base Technology &amp; Equipment Description</b>
Standard manual thermostat

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>212 m<sup>3</sup></b>
Enbridge conducted load research in 1997 which indicated savings of 8.1% per year Based on the average annual consumption for Enbridge at the time (2,652m <sup>3</sup> ). <sup>38</sup>	
<b>Electricity</b>	<b>100 kWh</b>
An NRCan report on energy efficiency trends in Canada states that "A central air conditioner is used to cool a larger space such as a house. This type of unit (32,000 Btu per hour) can use about 1969 to 2317 kWh in a cooling season." The average consumption is 2143 kWh. This is value is similar to the 2000 kWh used in Ontario Hydro's End Use model. The savings from a 25°C set-forward strategy is taken as 10% of 2000 kWh, that is, 200 kWh. A 50% saturation rate for central air-conditioning in existing homes is assumed to further discount the savings.	
<b>Water</b>	<b>n/a L</b>

### Other Input Assumptions

<b>Equipment Life</b>	<b>18 years</b>
Programmable thermostats have an estimated service life of 18 years (assumed to have the same life as a furnace).	
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>- \$65</b>
Based on average thermostat cost from Enbridge survey of major home renovation and hardware chains.	
<b>Free Ridership</b>	<b>11 %</b>
Free-ridership rate based on Enbridge Residential Market Survey 2000.	

<sup>38</sup> "Impact of 1997 Programmable Thermostat Program", reported at Consultative #14.

\*indicates assumption has changed from previously filed Substantiation Document.

## TANKLESS WATER HEATER

<b>Efficient Technology &amp; Equipment Description</b>
Tankless water heater (EF = 0.82)
<b>Base Technology &amp; Equipment Description</b>
Storage tank water heater (EF = 0.58)

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>203 m<sup>3</sup></b>
Natural gas savings claims are based on Exelon Services Report <sup>39</sup> . This savings estimate is similar to Union estimate of 206 m3 (see Tankless Water Heater – New Construction).	
<b>Electricity</b>	<b>n/a kWh</b>
<b>Water</b>	<b>n/a L</b>

### Other Input Assumptions

<b>Equipment Life</b>	<b>20 years</b>
Tankless water heaters have an estimated service life of 20 years <sup>40,41</sup> .	
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>- \$650</b>
Tankless water heaters have an equipment life that is approximately twice that of a conventional storage tank water heater. A representative tankless water heater (Rinnai 2532 FFU) has an installed cost of \$1800 <sup>42</sup> compared with a PV50 from Union Energy at \$850. Assuming a purchase of a second conventional tank type water heater will be required in 10 years at a cost in current dollars of approximately \$300 ( $\approx \$850/[1.1^{10}]$ ), the incremental cost of a tankless water heater is $\$1800 - \$850 - \$300 = \$650$ .	
<b>Free Ridership</b>	<b>2* %</b>
Free-ridership rate adjusted during ADR Settlement – September 2006. Nominal free-ridership included pending better information developed through the Evaluation and Audit Committee process.	

<sup>39</sup> Exelon Services Report, December 2002

\*indicates assumption has changed from previously filed Substantiation Document.

## WASTE WATER HEAT RECOVERY

<b>Efficient Technology &amp; Equipment Description</b>	
Waste water heat recovery	
<b>Base Technology &amp; Equipment Description</b>	
No waste water heat recovery	

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>267 m<sup>3</sup></b>
Natural gas savings claims are based on a Natural Resources Canada (NRCAN) document describing waste water heat recovery system energy credits for houses. <sup>16</sup> NRCAN provides a savings credit of 10.1 GJ (~ 267 m3) for a natural gas heated domestic water hot water system.	
<b>Electricity</b>	<b>n/a kWh</b>
<b>Water</b>	<b>n/a L</b>

### Other Input Assumptions

<b>Equipment Life</b>	<b>30 years</b>
Waste water heat recovery systems have an estimated service life of 30 years. <sup>17</sup>	
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>- \$625</b>
Enbridge reference from analysis of ET field installations.	
<b>Free Ridership</b>	<b>1* %</b>
Free-ridership rate adjusted during ADR Settlement – September 2006. Nominal free-ridership included pending better information developed through the Evaluation and Audit Committee process.	

**\*indicates assumption has changed from previously filed Substantiation Document.**

## **LOW INCOME**

\*indicates assumption has changed from previously filed Substantiation Document.

## FAUCET AERATOR

Efficient Technology & Equipment Description	
Faucet Aerator	
Base Technology & Equipment Description	
Standard faucet without aerator	

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>14* m<sup>3</sup></b>
(see Existing Homes - Faucet Aerator)	
<b>Electricity</b>	<b>n/a kWh</b>
<b>Water</b>	<b>6,520* L</b>
(see Existing Homes - Faucet Aerator)	

### Other Input Assumptions

<b>Equipment Life</b>	<b>10 years</b>
(see Existing Homes - Faucet Aerator)	
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>- \$3</b>
(see Existing Homes - Faucet Aerator)	
<b>Free Ridership</b>	<b>1* %</b>
Free-ridership rate adjusted during ADR Settlement – September 2006.	

\*indicates assumption has changed from previously filed Substantiation Document.

## LOW-FLOW SHOWERHEAD

<b>Efficient Technology &amp; Equipment Description</b>
Low-flow showerhead
<b>Base Technology &amp; Equipment Description</b>
Average existing stock (higher flow showerhead)t

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>115* m<sup>3</sup></b>
(see Existing Homes – Low-Flow Showerhead (per household))	
<b>Electricity</b>	<b>n/a kWh</b>
<b>Water</b>	<b>30,966* L</b>
(see Existing Homes – Low-Flow Showerhead (per household))	

### Other Input Assumptions

<b>Equipment Life</b>	<b>10 years</b>
(see Existing Homes – Low-Flow Showerhead (per household))	
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>- \$15</b>
(see Existing Homes – Low-Flow Showerhead (per household))	
<b>Free Ridership</b>	<b>5* %</b>
Free-ridership rate adjusted during ADR Settlement – September 2006.	

\*indicates assumption has changed from previously filed Substantiation Document.

## PIPE INSULATION

<b>Efficient Technology &amp; Equipment Description</b>
Conventional storage tank water heater w/o pipe insulation
<b>Base Technology &amp; Equipment Description</b>
Conventional storage tank water heater with pipe insulation

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>17 m<sup>3</sup></b>
(see Existing Homes – Pipe Insulation)	
<b>Electricity</b>	<b>n/a kWh</b>
<b>Water</b>	<b>n/a L</b>

### Other Input Assumptions

<b>Equipment Life</b>	<b>15 years</b>
(see Existing Homes – Pipe Insulation)	
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>\$4</b>
(see Existing Homes – Pipe Insulation)	
<b>Free Ridership</b>	<b>1* %</b>
Free-ridership rate adjusted during ADR Settlement – September 2006.	

\*indicates assumption has changed from previously filed Substantiation Document.

## PROGRAMMABLE THERMOSTAT

<b>Efficient Technology &amp; Equipment Description</b>	
Programmable thermostat	
<b>Base Technology &amp; Equipment Description</b>	
Standard manual thermostat	

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>212 m<sup>3</sup></b>
(see Existing Homes – Programmable Thermostat)	
<b>Electricity</b>	<b>100 kWh</b>
(see Existing Homes – Programmable Thermostat)	
<b>Water</b>	<b>n/a L</b>

### Other Input Assumptions

<b>Equipment Life</b>	<b>18 years</b>
(see Existing Homes – Programmable Thermostat)	
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>- \$90</b>
(see Existing Homes – Programmable Thermostat)	
<b>Free Ridership</b>	<b>1* %</b>
Free-ridership rate adjusted during ADR Settlement – September 2006.	

\*indicates assumption has changed from previously filed Substantiation Document.

## **COMMERCIAL - NEW BUILDING CONSTRUCTION**

\*indicates assumption has changed from previously filed Substantiation Document.

## CONDENSING GAS WATER HEATER

<b>Efficient Technology &amp; Equipment Description</b>
Condensing storage tank water heater (EF = 0.86)
<b>Base Technology &amp; Equipment Description</b>
Non-condensing storage tank water heater (EF = 0.59)

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>1412*</b>	<b>m<sup>3</sup></b>
Natural gas savings claims are based on Union Gas Commercial Water Heater Comparison Screening Tool using a typical full service restaurant water draw of 950 gallons/day. <sup>43</sup>		
<b>Electricity</b>	<b>n/a</b>	<b>kWh</b>
<b>Water</b>	<b>n/a</b>	<b>L</b>

### Other Input Assumptions

<b>Equipment Life</b>	<b>15</b>	<b>years</b>
Condensing gas water heaters have an estimated service life of 15 years. <sup>44</sup>		
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>-</b>	<b>\$4,200</b>
Condensing gas water heaters have an estimated cost of \$5,000 and ASHRAE 90.1b tank has an estimated cost of \$800 – therefore the incremental cost is \$4,200.		
<b>Free Ridership</b>		<b>5 %</b>
Free-ridership rate as per 2005 ADR Settlement – EB-2005-0211. <sup>45</sup>		

<sup>43</sup> "Union Gas Commercial Water Heater Comparison Screening Tool" output for commercial condensing water heater

<sup>44</sup> "Prescriptive Incentives for Select Natural Gas Technologies", Prepared for Enbridge Consumers Gas and Union Gas Ltd., Prepared by: Jacques Whitford Environment Limited, Agviro Inc., and Engineering Interface Ltd., September 27, 2000.

<sup>45</sup> EB-2005-0211, Union Gas Settlement Agreement, April 7, 2005.

\*indicates assumption has changed from previously filed Substantiation Document.

## ROOFTOP UNIT

<b>Efficient Technology &amp; Equipment Description</b>
Two-stage rooftop units
<b>Base Technology &amp; Equipment Description</b>
Single-stage rooftop units

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>1275</b>	<b>m<sup>3</sup></b>
The natural gas savings are estimated from the difference in annual gas consumption from single-stage to two-stage operation. <sup>46</sup>		
<b>Electricity</b>	<b>n/a</b>	<b>kWh</b>
<b>Water</b>	<b>n/a</b>	<b>L</b>

### Other Input Assumptions

<b>Equipment Life</b>	<b>20</b>	<b>years</b>
Rooftop units have an estimated service life of 20 years.		
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>-</b>	<b>\$1,250</b>
The incremental cost of two-stage rooftop units compared with single-stage units is \$1250. <sup>44</sup>		
<b>Free Ridership</b>	<b>5*</b>	<b>%</b>
Free-ridership rate adjusted during ADR Settlement – September 2006. Nominal free-ridership included pending better information developed through the Evaluation and Audit Committee process.		

<sup>46</sup> "Prescriptive Incentives for Select Natural Gas Technologies", Prepared for Enbridge Consumers Gas and Union Gas Ltd., Prepared by: Jacques Whitford Environment Limited, Agviro Inc., and Engineering Interface Ltd., September 27, 2000.

\*indicates assumption has changed from previously filed Substantiation Document.

## TANKLESS WATER HEATER

<b>Efficient Technology &amp; Equipment Description</b>
Tankless water heater
<b>Base Technology &amp; Equipment Description</b>
Conventional storage tank water heater (140 US Gallon)

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>825</b>	<b>m<sup>3</sup></b>
Natural gas savings claims are based on Union Gas Commercial Water Heater Comparison Screening Tool using a typical full service restaurant water draw of 950 gallons/day. <sup>47</sup>		
<b>Electricity</b>	<b>n/a</b>	<b>kWh</b>
<b>Water</b>	<b>n/a</b>	<b>L</b>

### Other Input Assumptions

<b>Equipment Life</b>	<b>20</b>	<b>years</b>
Equipment life is assumed to be 20 years based on manufacturer literature estimate of "20+ years".		
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>-</b>	<b>\$2,200</b>
Incremental cost is estimated at \$2,200.		
<b>Free Ridership</b>	<b>2*</b>	<b>%</b>
Free-ridership rate adjusted during ADR Settlement – September 2006. Nominal free-ridership included pending better information developed through the Evaluation and Audit Committee process.		

<sup>47</sup> "Union Gas Commercial Water Heater Comparison Screening Tool" output for commercial tankless water heater

\*indicates assumption has changed from previously filed Substantiation Document.

## **COMMERCIAL - EXISTING BUILDINGS**

\*indicates assumption has changed from previously filed Substantiation Document.

## CONDENSING GAS WATER HEATER

<b>Efficient Technology &amp; Equipment Description</b>
Condensing storage tank water heater (EF = 0.86)
<b>Base Technology &amp; Equipment Description</b>
Non-condensing storage tank water heater (EF = 0.59)

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>1412*</b>	<b>m<sup>3</sup></b>
Natural gas savings claims are based on Union Gas Commercial Water Heater Comparison Screening Tool using a typical full service restaurant water draw of 950 gallons/day. <sup>48</sup>		
<b>Electricity</b>	<b>n/a</b>	<b>kWh</b>
<b>Water</b>	<b>n/a</b>	<b>L</b>

### Other Input Assumptions

<b>Equipment Life</b>	<b>15</b>	<b>years</b>
Condensing gas water heaters have an estimated service life of 15 years.		
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>-</b>	<b>\$4,200</b>
Condensing gas water heaters have an estimated cost of \$5,000 and ASHRAE 90.1b tank has an estimated cost of \$800 – therefore the incremental cost is \$4,200.		
<b>Free Ridership</b>	<b>5</b>	<b>%</b>
Free-ridership rate as per 2005 ADR Settlement – EB-2005-0211. <sup>49</sup>		

<sup>48</sup> "Union Gas Commercial Water Heater Comparison Screening Tool" output for commercial condensing water heater

<sup>49</sup> EB-2005-0211, Union Gas Settlement Agreement, April 7, 2005.

\*indicates assumption has changed from previously filed Substantiation Document.

## FAUCET AERATOR

<b>Efficient Technology &amp; Equipment Description</b>	
Faucet Aerator	
<b>Base Technology &amp; Equipment Description</b>	
Standard faucet without aerator	

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>14* m<sup>3</sup></b>
(see Existing Homes - Faucet Aerator)	
<b>Electricity</b>	<b>n/a kWh</b>
<b>Water</b>	<b>6,520* L</b>
(see Existing Homes - Faucet Aerator)	

### Other Input Assumptions

<b>Equipment Life</b>	<b>10 Years</b>	
(see Existing Homes - Faucet Aerator)		
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>\$2</b>	<b>\$3</b>
(see Existing Homes - Faucet Aerator)		
<b>Free Ridership</b>	<b>10 %</b>	
As approved in the Enbridge Partial Decision EB 2005-0001.		

\*indicates assumption has changed from previously filed Substantiation Document.

## HIGH EFFICIENCY FURNACE (up to 299 MBtu/h)

<b>Efficient Technology &amp; Equipment Description</b>
High efficiency furnace
<b>Base Technology &amp; Equipment Description</b>
Mid-efficiency furnace

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>5.1* m<sup>3</sup> / 1000 Btu/h</b>
Based on residential high-efficiency gas savings of 385 m <sup>3</sup> (see Existing Homes – High Efficiency Furnace) and a typical residential furnace input of 75,000 Btu/h furnace → 385/75 = 5 m <sup>3</sup> / 1000 Btu/h.	
<b>Electricity</b>	<b>n/a kWh</b>
<b>Water</b>	<b>n/a L</b>

### Other Input Assumptions

<b>Equipment Life</b>	<b>18 Years</b>
High efficiency furnaces have an estimated service life of 18 years. <sup>50</sup>	
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>- \$650</b>
The incremental cost is based on a pricing survey of 15 contractors in the Union Gas franchise area. The single incremental cost number is weighted average of Union Gas South (70%) and Union Gas North (30%) average incremental costs.	
<b>Free Ridership</b>	<b>17.5* %</b>
Free-ridership rate adjusted during ADR Settlement – September 2006.	

<sup>50</sup> ASHRAE Applications Handbook – 2003, Chapter 36 – Owning and Operating Costs, Table 3.

\*indicates assumption has changed from previously filed Substantiation Document.

## LOW-FLOW SHOWERHEAD (per household)

<b>Efficient Technology &amp; Equipment Description</b>	
Low-flow showerhead	
<b>Base Technology &amp; Equipment Description</b>	
Based on contractor testing and replacement of high flow units.	

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>115* m<sup>3</sup></b>
(See Existing Homes – Low-Flow Showerhead (per household))	
<b>Electricity</b>	<b>n/a kWh</b>
<b>Water</b>	<b>30,966* L</b>
(See Existing Homes – Low-Flow Showerhead (per household))	

### Other Input Assumptions

<b>Equipment Life</b>	<b>10 Years</b>
(See Existing Homes – Low-Flow Showerhead (per household))	
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>- \$15</b>
(See Existing Homes – Low-Flow Showerhead (per household))	
<b>Free Ridership</b>	<b>10 %</b>
As approved in the Enbridge Partial Decision EB 2005-0001.	

\*indicates assumption has changed from previously filed Substantiation Document.

## LOW-FLOW SHOWERHEAD (per showerhead)

<b>Efficient Technology &amp; Equipment Description</b>
Low-flow showerhead
<b>Base Technology &amp; Equipment Description</b>
Average existing stock (higher flow showerhead)

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>91* m<sup>3</sup></b>
(See Existing Homes – Low-Flow Showerhead (per showerhead))	
<b>Electricity</b>	<b>n/a kWh</b>
<b>Water</b>	<b>19,354* L</b>
(See Existing Homes – Low-Flow Showerhead (per showerhead))	

### Other Input Assumptions

<b>Equipment Life</b>	<b>10 years</b>
(See Existing Homes – Low-Flow Showerhead (per showerhead))	
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>\$5 -</b>
(See Existing Homes – Low-Flow Showerhead (per showerhead))	
<b>Free Ridership</b>	<b>10 %</b>
As approved in the Enbridge Partial Decision EB 2005-0001.	

\*indicates assumption has changed from previously filed Substantiation Document.

## PRE-RINSE SPRAY NOZZLE

Efficient Technology & Equipment Description	
Low-flow pre-rinse spray nozzle	
Base Technology & Equipment Description	
Standard pre-rinse spray nozzle	

### Resource Savings Assumptions

Natural Gas	<b>2,434 m<sup>3</sup></b>
Natural gas savings claims are based on the reduction of hot water use achieved by switching from an old pre-rinse spray nozzle (3 USGPM) <sup>51</sup> to a low-flow pre-rinse spray nozzle(1.6 USGPM). Savings are based on the assumption of 3.75 hours of use per day <sup>52</sup> , 363 days per year. Savings were determined using the Pre-Rinse Spray Nozzle Savings spreadsheet <sup>53</sup> which provides consistent results with the Food Service Technology Centre’s “Pre-Rinse Spray Valve Calculator” <sup>54</sup> .	
Electricity	<b>n/a kWh</b>
Water	<b>432,800 L</b>
Water savings claims <sup>54,53</sup> are based on the reduction of water use achieved by switching from an old spray nozzle (3 USGPM) to a low-flow spray nozzle (1.6 USGPM).	

### Other Input Assumptions

Equipment Life	<b>5 years</b>
Pre-rinse spray nozzles have an estimated service life of 5 years. <sup>51,55</sup>	
Incremental Cost (Cust. / Contr. Install)	<b>- \$100</b>
The incremental cost is assumed to be \$100 – the cost of the spray nozzle and installation. This is comparable to the incremental cost of \$60 reported by the Region of Waterloo <sup>56</sup>	
Free Ridership	<b>5 %</b>
A free-ridership rate of 5% is based on Enbridge’s consultation with distributor.	

<sup>51</sup> “How to Buy a Low Flow Pre-Rinse Spray Valve”, DOE Bulletin WS-5, September 2004.

<sup>52</sup> Enbridge market survey of average usage

<sup>53</sup> Pre-Rinse Spray Nozzle Savings spreadsheet, Union Gas

<sup>54</sup> [www.fishnick.com/tools/watercost/](http://www.fishnick.com/tools/watercost/)

<sup>55</sup> CEE Commercial Kitchens Initiative - Program Guidance on Pre-Rinse Spray Valves

<sup>56</sup> “Region of Waterloo – Pre-Rinse Spray Valve Pilot Study – Final Report”, Veritec Consulting Inc., January 2005

\*indicates assumption has changed from previously filed Substantiation Document.

## PROGRAMMABLE THERMOSTAT

<b>Efficient Technology &amp; Equipment Description</b>
Programmable thermostat
<b>Base Technology &amp; Equipment Description</b>
Standard manual thermostat

### Resource Savings Assumptions (per building)

<b>Natural Gas</b>	<b>519</b>	<b>m<sup>3</sup></b>											
The natural gas savings are based on average space heating gas consumption for office buildings in the Union Gas franchise area. The savings are determined using the same methodology used for the residential programmable thermostat savings which were based on a CCHT report. <sup>57</sup>													
<b>Normalized Use per customer 2003</b>													
Segment	J	F	M	A	M	J	J	A	S	O	N	D	Total
Office Total	1693	2274	1782	1235	750	367	246	208	240	325	798	1143	
<b>Assume baseload is average of June - Sept consumption</b>												265	
Space heating	1427	2009	1517	970	485	101				59	533	878	<b>7979</b>
From CCHT report, 18 C night setback results in 6.5% annual gas savings												<b>519</b>	<b>m<sup>3</sup></b>
<b>Electricity</b>	<b>921</b>	<b>kWh</b>											
The electricity savings are determined using the same methodology used for the residential programmable thermostat savings. It is assumed that a night-time / weekend "set-forward" strategy is suitable for office buildings and that this will result in similar savings to the day set-forward strategy. The electricity consumption for air conditioning is assumed to be proportional to the gas consumption with the same ratio as residential. From HOT2XP residential simulations, the ratio of space cooling to space heating was found to be 1.05 kWh/m <sup>3</sup> . Applying this ratio to the space heating gas consumption result, the annual space cooling electricity consumption is estimated to be 8370 kWh. Applying the 11% electricity savings, reported in the CCHT report, to this derived consumption results in estimated savings of 921 kWh.													
<b>Water</b>	<b>n/a</b>	<b>L</b>											

### Other Input Assumptions

<b>Equipment Life</b>	<b>18</b>	<b>years</b>
Programmable thermostats have an estimated service life of 18 years (assumed to be the same as a furnace).		
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>-</b>	<b>\$65</b>
Based on average thermostat cost from Enbridge survey of major home renovation and hardware chains.		
<b>Free Ridership</b>	<b>20*</b>	<b>%</b>
Free-ridership rate adjusted during ADR Settlement – September 2006.		

<sup>57</sup> Manning, M.M; Swinton, M.C.; Szadkowski, F.; Gusdorf, J.; Ruest, K., "The Effects of Thermostat Setting on Seasonal Energy Consumption at the CCHT Research Facility", IRC-RR 191, February 14, 2005.

\*indicates assumption has changed from previously filed Substantiation Document.

## ROOFTOP UNIT

<b>Efficient Technology &amp; Equipment Description</b>
Two-stage rooftop units
<b>Base Technology &amp; Equipment Description</b>
Single-stage rooftop units

### Resource Savings Assumptions

<b>Natural Gas</b>	1275	m <sup>3</sup>
(See New Building Construction – Rooftop Unit)		
<b>Electricity</b>	n/a	kWh
<b>Water</b>	n/a	L

### Other Input Assumptions

<b>Equipment Life</b>	20	years
Rooftop units have an estimated service life of 20 years.		
<b>Incremental Cost (Cust. / Contr. Install)</b>	-	\$1,250
(See New Building Construction – Rooftop Unit)		
<b>Free Ridership</b>	5*	%
Free-ridership rate adjusted during ADR Settlement – September 2006. Nominal free-ridership included pending better information developed through the Evaluation and Audit Committee process.		

\*indicates assumption has changed from previously filed Substantiation Document.

## TANKLESS WATER HEATER

<b>Efficient Technology &amp; Equipment Description</b>
Tankless water heater
<b>Base Technology &amp; Equipment Description</b>
Conventional storage tank water heater (140 US Gallon)

### Resource Savings Assumptions

<b>Natural Gas</b>	<b>825</b>	<b>m<sup>3</sup></b>
Natural gas savings claims are based on Union Gas Commercial Water Heater Comparison Screening Tool using a typical full service restaurant water draw of 950 gallons/day. <sup>47</sup>		
<b>Electricity</b>	<b>n/a</b>	<b>kWh</b>
<b>Water</b>	<b>n/a</b>	<b>L</b>

### Other Input Assumptions

<b>Equipment Life</b>	<b>20</b>	<b>years</b>
Equipment life is assumed to be 20 years based on manufacturer literature estimate of "20+ years". <sup>13,14</sup>		
<b>Incremental Cost (Cust. / Contr. Install)</b>	<b>-</b>	<b>\$2,200</b>
The incremental cost of tankless water heater is estimated to be \$2,200.		
<b>Free Ridership</b>	<b>2*</b>	<b>%</b>
Free-ridership rate adjusted during ADR Settlement – September 2006. Nominal free-ridership included pending better information developed through the Evaluation and Audit Committee process.		

\*indicates assumption has changed from previously filed Substantiation Document.

## ENHANCED FURNACE (up to 299 MBtu/h)

<b>Efficient Technology &amp; Equipment Description</b>
Two-stage furnace with ECM
<b>Base Technology &amp; Equipment Description</b>
Mid efficiency furnace

### Resource Savings Assumptions - (Furnace / ECM)

<b>Natural Gas</b>	<b>5.1* / -0.87* m<sup>3</sup> / 1000 Btu/h</b>
Based on residential enhanced furnace gas savings of 385 m <sup>3</sup> and gas penalty of -65 m <sup>3</sup> (see Existing Homes – Enhanced Furnace) and a typical residential furnace input of 75,000 Btu/h furnace → 385/75 = 4.3 m <sup>3</sup> / 1000 Btu/h and -65/75 = -0.87 m <sup>3</sup> / 1000 Btu/h.	
<b>Electricity</b>	<b>0* / 9.7* kWh / 1000 Btu/h</b>
Based on residential enhanced furnace electricity savings of 730 m <sup>3</sup> (see Existing Homes – Enhanced Furnace) and a typical residential furnace input of 75,000 Btu/h furnace → 730/75 = 9.7 kWh / 1000 Btu/h.	
<b>Water</b>	<b>n/a L</b>

### Other Input Assumptions - (Furnace / ECM)

<b>Equipment Life</b>	<b>18 years</b>
Two-stage, high efficiency furnaces have an estimated service life of 18 years. <sup>58</sup>	
<b>Incremental Cost</b>	<b>- \$650/\$550</b>
The incremental cost is based on a pricing survey of 15 contractors in the Union Gas franchise area. The single incremental cost number is weighted average of Union Gas South (70%) and Union Gas North (30%) average incremental costs.	
<b>Free Ridership</b>	<b>30* / 10* %</b>
Free-ridership rate adjusted during ADR Settlement – September 2006.	

<sup>58</sup> ASHRAE Applications Handbook – 2003, Chapter 36 – Owning and Operating Costs, Table 3.
